If you want to feel at home in the world of computers, you'll want the best home computer in the world.

We live in the age of computers.

Coming to terms with them and enjoying them is part of coming to terms with the twentieth century.

A few years ago, a computer would have filled a fair-sized room. Now microtechnology has allowed Commodore to produce a home computer, the VIC 20, that's no bigger than a typewriter yet performs miracles.

FOR BUSINESS, OR PLEASURE.

VIC can keep your diary up to date. Teach you mathematics. Play an enormous range of video games. Even play a piece of music to soothe your worried brow.

In fact, you and VIC can do almost anything better. Keeping records of family finances, sorting out and working out household accounts, being one step ahead of the bank manager or helping your own business be more businesslike.

VIC'S THE BEST, BY FAR.

Contrary to popular belief, computers are really rather friendly. VIC is particularly easy to understand. It's what the computer people call 'user friendly'. The typewriter-type keyboard is easy to use. It even tells you about mistakes you might make.

If you're technically minded, here's a reminder. VIC has a 5k memory expandable to 29k. (That means you can put in an almost endless amount of information.)

But what makes the VIC the best home computer by far are features that are just not available in most other home computers. Features like colour, computer graphics and sound.

PLUG IN AND YOU'RE OFF.

VIC plugs in to any television set, colour or black and white. (We even fit a 13 amp

plug, so you can play with VIC right away.)

You don't have to learn a special language. VIC speaks English, just like you. With the help of our handbook, you will begin to feel at home to the world of computers in no time at all.

COMPUTER SUPERMARKET'S GUARANTEE.

Buy through Computer Supermarket and you get exactly what's promised. We guarantee you that.

Every machine is thoroughly tested before it's despatched. And every machine is guaranteed for twelve months on parts and labour. (Not that you'll need it, of course.)

In the unlikely event that you don't want to keep your VIC, just return it. In its original packaging, within 30 days and your money will be completely refunded.

FREE PROGRAMS.

Apart from the more practical things like accounting, and the more pleasurable

things like video games, you can put VIC to literally hundreds of uses.

There are pre-recorded programs on many different subjects. You can develop your own programs and store them by using ordinary cassette tape.

The special Commodore cassette deck is on offer at only £44.95. If you buy VIC and the deck together we'll send you a 6 program pack to start you off that's absolutely free.

YOUR FUTURE WITH VIC.

It's a big step into the future. Understanding the future.

Having fun in the future. Even saving money in the future.

Every member of the family, especially the young, will feel at home with VIC right away. So send in the coupon. We're sure you'll find the best home computer in the world will make the world of difference to you and your family.

INNOVATIVE TRS 80-GENIE SOFTWARE

from the professionals

Mysterious Adventure ★★ ★

Three months ago we introduced the Mysterious Adventure series, a brand new series of machine language Adventures written by Brian Howarth. The first one, The Golden Baton, was greeted with enthusiasm by experienced and beginner Adventurers alike. Now the second and third in the series, The Time Machine and Arrow of Death, are available. The Arrow of Death, although entirely self-contained, is the first of a two part Adventure. The second part will be available early in the new year.

Mysterious Adventures are available for Models I and III TRS-80 and Models I and II Video Genie, both on tape (16K minimum) or disk (32K I disk minimum). A TRS-80 Model II version will be available shortly.

Any 1 Adventure	On tape . . .	£10.00	Any 2 Adventures	On tape	£18.40
	On disk . . .	£12.65		On disk	£23.00

All prices are inclusive of V.A.T. Please add 50p for P. & P.

MAILBAG

GLOSSARY PUT TO GOOD USE

Dear Sir,

Being an Atari owner, I bought your magazine and was quite amazed at the possible applications computers can be put to.

I now day-dream of owning one of my own so have entered this tongue-in-cheek attempt, not knowing the slightest thing about Basic, but having digested the software glossary:

PUZZLE SOLUTION — RUNS ON 4 CUPS OF COFFEE +

PACKET OF CIGARETTES

GOTO — quiet room when family have gone to bed

INPUT — 1st cup of coffee and cigarette

CURSOR — hundred times when random juggling fails to solve puzzle

INPUT — further cup of coffee + cigarette

RAM — head against wall for spilling coffee on puzzle

VARIABLE — success — only 3 sides matching

POKE — cat for mixing up cards thinking I wanted to play with him

OUTPUT — cat into garden

PEEK — at next-door-neighbour getting undressed with curtains open

RUN — indoors pretty quick when spotted by husband

DE.BUG — caused by much head scratching after further unsuccessful attempts

DISC — perhaps soothing music might help

LOOPY — if I don't solve it soon

INPUT — more coffee + cigarettes

LANGUAGE — getting pretty blue now

RESISTOR — temptation to give in

(HIAHRAI) — I've done it

INPUT — 4th cup of coffee + last cigarette

It's the honest TRUTH-VALUE as well. I'm not STRINGING you along, it's a GRAPHIC account of what happened. I'd thought I'd GO-SUBmit this to your EDITOR by putting it in the post box FORTRANsit to you.

If you have a CAPACITOR for generosity you might PRINT this and send me some EEE — or even a microcomputer!

D. J. Spake,
Ravensthorpe,
Peterborough.

THE INVADERS MYSTERY-SOLVED

Dear Sir,

First of all, I would just like to say what a superb first issue the Computer & Video Games was: as a beginner, I look forward to buying the magazine regularly.

Anyone who is addicted to "Space Invaders" will tell you that when the little green "meemies" get a little too low for comfort it can be quite a struggle to clear them off the screen when you only have one laser base left. Well, here is a tip which will amaze onlookers and make things a great deal easier.

If there are only 10 to 15 "invaders" left but are extremely low (not so low as to allow you to pass underneath without risk of losing a base) and your laser base is to the left of them and the "invaders" are going right, try firing at the second and third bases. Doing this will mean you get a "deflection" i.e. the "invaders" on the second row up will be shot thus killing some of them without you being near them. (Amazing eh?).

MORE LETTERS on Page 7

This trick is best appreciated being done and will help build up your score. Also, some people don't realise that you can become proficient in obtaining 300 points from the "mystery" space ship. First of all, fire 22 lasers, wait, and shoot the mystery saucer with the 23rd shot. From then on, shoot the mystery ship with the 15th shot. Doing it this way will enable you to obtain a high score quickly. (I frequently score 3390 points on the first sheet!)

Another tip, don't shoot the invaders in the middle first but get the ends first, that way the invaders won't come down so quickly.
Ian Clark,
Dalton,
Huddersfield,
Yorkshire.

Editor's reply: Thanks for the tips Ian, some. I'm sure, many space invaders' players know already, others may prove a real eye-opener. Now a question for you, do you know how to get a Rainbow on Space Invaders Part II?

DISCIPLINE SNAG JNR.

Dear Sir,

Firstly let me congratulate you on an original and interesting magazine. But there is an error in line 200 of Keith Campbell's Adventure column (December issue).

Please discipline Snag Jnr. before you write any more programs as he may well become another Screaming Foul-up.

Simon Balfre,
Kingston-upon-Thames.

Keith Campbell replies: A typographical error did creep into this second column in line 200. It should have read:

```
200 IF MIDS (ES(LN),1,1) = RS  
THEN LN = VAL  
(MIDS(DS(LN),1,1)):GOTO 160
```

Another point on last month's column. I used READ and DATA to set up arrays — sorry Sinclair owners! You will have to directly assign the array e.g. LET LS(0) = "COTTAGE".

PET SOFTWARE

DIATRON ATTACK

Tha Diatrons are a mean bunch of aliens. They have no usa for what they are stealing from you (your diamonds), but nevertheless, their guiding principle is to 'steal first' and ask questions later.

This offends your moral standards so much that you have no hesitation in using your terrible spikes.

See them beam down and squawk. Sharpen up your reflexes and beat back the waves of descending Diatrons.

16K (New Rom)
£8.95

Sub Commander

This is not an Arcade type game but it is a real time graphics simulation of the commander of a World War II sub. Your mission as commander is to seek out and destroy enemy shipping, both warship and merchantman.

The merchantmen are not always sitting ducks as Q ships are also encountered but radar, periscopes, hydrophone etc. with a good visual display enable you to hunt effectively.

Don't forget to contact your supply ship as running out of fuel or ammunition is rather embarrassing to a commander in line for the IRON CROSS.

GOOD HUNTING
32K and 16K versions (New Rom)
Please specify £13.95

CONQUEROR

A tyrant is sweeping through Europe unopposed. GORVAN THE TERRIBLE is well named. You have been put in command of the armies which control the few remaining countries of the alliance.

More survival will be difficult but your task is to eradicate GORVAN from the face of Europe.

The prize? — fame and glory
To fail? — Gorvan is indeed terrible

A game of tactics and strategy played with excellent graphical representation of Europe.

16K (New Rom)
£12.95

ASTEROIDS.

Fast action Pet version of popular arcade type game 'Asteroids'. All the facilities. Rotate, Fire, Hyperspace, Jump.

(Old and New Rom)
on one cassette 8k £9.95

TRS-80, APPLE SOFTWARE

Are you fed up with games where you just shoot a few invaders or depend on your reactions, then try a whole new world of computer fantasy, a world in which Sorcery and Monsters holds sway, try:

SORCERER OF SIVA

A real-time GRAPHIC adventure

Sorcerer of Siva is a game where you enter a different world where Amulets, rings, necklaces, sceptres — and — oh, yes a pair of old boots await you — in the magical mines of Siva.

Enter the dark stillness of the mine, armed with staff and dagger and relying on your magical abilities. Beware of the wandering soulless creatures that dwell in the magical mine, guarding every fissure and trap door.

Use your magical powers to avert the bloodthirsty banshees, put an end to the deadly demon, or the goblin waiting to waylay you.

Walk through walls and sealed entrances, cast a spell to heal your wounds, regain your strength or hurl bolts of lightning.

A wizard you are, yes, but watch out for the evil Sorcerer who is waiting to cast his favourite spell — forgetfulness — to deprive you of your most valuable magic.

But all is not lost — you may regain a spell or two, or perhaps even one new to you — If you can discover the wondrous touchstones, alone saturated with powers to restore your magical abilities. Be warned too, that not all treasures you might find are true. In experience lies wisdom.

£15.95 TRS 80 & V.G. (level II, 16k) cassette

£17.95 TRS-80 (32k TRSDOS), Apple (48k with Applesoft in ROM)

The Upper Reaches of Apschai . . .

. . . is the first in a series of expansion modules for 'The Temple'. Horrible monsters lurk in the innkeeper's backyard. Discover the secrets of Benedict's Monastery and the cottage of Merla the Mage. Who knows what secrets the cellar of Olies holds.

Over 150 new rooms for you to explore.

The Keys of Acheron

For those of you who have succeeded in rescuing Brynheid as the Hellfire Warrior, now have an even more difficult task. Four magical jewels, the keys, each in a different dimension, must be recovered from Kronus the Demon.

Both The Upper Reaches of Apschai and The Keys of Acheron are expansion modules for the Temple and Hellfire, you must have these games to play them.

£11.95 TRS-80 & V.G. (level II 16k) cassette

Temple of Apschai £16.95

Hellfire Warrior £16.95

SPECIAL OFFER: If you don't have Temple or Hellfire, then purchase both Temple and The Upper Reaches of Apschai or Hellfire Warrior and the Keys of Acheron for just

£24.95 Cass. £26.95 disk.

All prices include p & p and V.A.T.

MAILBAG

TO FIT 2K OR NOT TO FIT 2K

Dear Sir,

Recently, I read about the Sinclair ZX81 kit, and I found out that it was possible to fit a 4816 2K x 8 RAM in 28-pin pack in the RAM location instead of the normal 1K. What I would like to know is where to get this 2K RAM from and how much it would cost?

I have also heard a rumour that it is possible to fit a 5K RAM instead at a cost of £19.95. Is it true? If so could you give me more details and what effect would it have in conjunction with the 16K RAM pack, i.e. what final K would it have?

V. Napolitano,
Slough,
Berks.

Our expert replies: You are correct in assuming that the ZX81 can take a 2K RAM in place of the two 2114s or the one 4118 used now as the 1K memory. The 4816, 2K by 8 RAM is available through Pronto Electronics Systems, 446-478 Cranbrook Road, Gants Hill, Ilford, Essex. The chip is made by Mostek, MK 4816. The one-off price is about £30, which is excessive!

As to your other enquiry, there are several versions of expandable memory which will slot onto the back connector of the ZX81 in place of the Sinclair 16K RAM pack. These vary from 3K up to 64K at a cost of £9 to £110 respectively. This makes the 16K RAM pack look rather expensive.

The maximum amount of usable memory would seem to be 64K although it appears that there is a 128K expansion board available using a paging system.

A PACK OF PROBLEMS

Dear Sir

Having purchased the ZX81 and 16K RAM Pack, I have experienced the following:

- 1) The P.S.U. as supplied with the kit was intermittent. This

If you have a comment or idea for Computer & Video Games we would like to hear from you.

Please drop us a line at: Computer & Video Games, EMAP, Durrant House, 2, Herby Hill, London EC1R 5JB.

was due to a broken leg on the transformer LT winding.

- 2) The basic (no pun) unit crashed after a couple of hours' use.

Due I believe, to excessive heating of the Voltage Regulator — it appeared that heat was affecting the 8K ROM?

Having fitted a larger area of heat sink this problem seems to be eliminated.

- 3) During periods of programming the machine, with the 16K RAM attached, the whole "caboodle" crashes. To this, at the moment, I have found no simple answer.

So, the area of my concern at this time is to find an answer to the 16K problem.

It is not easy for me to return the pack to Sinclair as I have delved into the workings. To help cure picture jitter of graphics I have fitted 0.1 Fd capacitors to the remaining memory chips. This modification has "cured" that problem. However, in the course of trying to solve problem three, I have broken the wire ribbon connecting the two boards together. I've replaced this with a different ribbon altogether and so, probably, invalidated the warranty.

So, perhaps your resident expert, or other readers could provide an answer to what appears to be a nationwide dilemma.

R. L. J. Winson,

Martimer,
Reading,
Berks.

Our expert replies: I have come across the problems you have suffered many times and, with some success, have managed to sort them out.

The problem of the system crashing has been one which has plagued many and the only explanation I have been able to find is that through entering a

long program the external RAM pack becomes a little loose. This leads to spurious signals reaching the ZX81 which causes the system to crash. One way of fixing the fault, literally, is to attack the pack with super-glue. This however, is rather drastic unless you intend never to move the unit. The more temporary measure is to support the pack with a thin book or whatever while you are programming.

If, however, this does not cure the problem do not hesitate to return the pack to Sinclair, who in the past have repaired items which do not look like ZX81s at all.

CRASHING ALIENS

Dear Sir,

I am an avid 14-year-old computer addict. In my school we have a Research Machine 380Z which I use frequently.

In the last issue of Computer & Video Games you published an Invaders program for the Nascom 2. After making the necessary language changes from Nasbasic, I ran the program but unfortunately it crashed.

So please would you kindly either print an Invaders program for the 380Z or let me know where to obtain one.

Ronald Lewis
Aldington Road
Streatham
London SW10

Editor's reply: You can find a source from which to obtain an Invaders program by scanning the adverts from suppliers of software for the RM 380Z. Ronald, I'm not so sure that this is the best use to which a school micro can be put: I hope that you wouldn't prevent anyone from using the machine for school work, or even to develop their own programs, by playing space Invaders!

The problem of translating a program from one dialect of Basic to another, is such a common one that a book has been written to help people to do it. *The Basic handbook* by David A. Lien (Compusoft Publishing, 1978) lists the corresponding features of many Basic dialects, including several of those implemented on micros.

the vic centre

station

Not just a computer but a whole expandable system

AT ONLY £189.95 inc. VAT. Special cassette deck £44.95 inc. VAT.

The VIC-20 is a fully fledged, easy-to-use computer. It's the core of a great expandable system.

- **EXPANDABLE MEMORY**—UP TO 32K USING PLUG-IN MODULES
- **DISK DRIVE/CASSETTE**—FOR EXTERNAL STORAGE
- **PRINTER**—80 COLUMN 30 CHARACTERS-PER-SECOND

First time users can operate it immediately with plug-in program cartridges, and using your own colour T.V. to get up to 24 colours on screen, four different sound tones and even write your own programs in BASIC. The VIC-20 lets you build a system as needs and budget dictate so that your VIC-20 can be more than just a personal computer.

VIC MEMORY 3K See 85
Small size—low cost memory expansion. Plug into Vic and reproduces memory port. Can be used with other expansions gives a total of 6k user elastic memory. **VIC FEATURE** This board allows Vic to expand Basic to begin at 1024 (50400) as in Put and enables the use of HIGH RESOLUTION COLOUR GRAPHICS.

VIC-LIGHT PEN £26.75
This high quality light pen works in both normal and Hi Res modes on the Vic allowing simple interaction with the Vic without keyboard entry. Easy to program and easy to use. e.g. Menu selection. Non keyboard entry. Teaching Games. **FEATURE** Touch sensitive. Enter contacts to eliminate accidental entry.

VIC RS232C INTERFACE £56.35
Fully implemented data level RS232C V24.

BI DIRECTIONAL INTERFACE
Allows Vic to work as Mainframe Terminal. Drive a Qume Displaywheel or a Paper Tape Punch etc etc. **FEATURE** This unit contains master power supply which supports Vic 2 own supply when carrying Memory Expansions. Cassette Drives. Light Pens, Printers etc.

VIC JOYSTICK Single £14.95
stand-held joystick units for game use available in Pair or Single configuration. N.B. (2 Singles will not work as a pair unless modified).

VIC Games Port Adapter Cable £18.95
A two into one adaptor for use with both joysticks and light pens. A must for those who require full control of games with graphics. **FEATURE** low-cost High quality. Robust.

Adda Computers Ltd., a major supplier of computer systems to industry and business, have opened the Vic Centre in West London. Here you can see, discuss and buy everything to do with the new VIC 20 personal computer—in person or by mail. Hardware software, technical advice and information is available from an experienced staff. Even if you already own a VIC 20, get on our mailing list to know about new developments. Remember—everything has the backing of Adda's reputation, and there's a full 12-month warranty on all hardware. The Vic Centre is easy to reach—just off the A40, close to North Acton tube station.

TIONCOMPETITIONCOMP

TAKE ON THE ARCADE WORLD

The search is on to find the roughest, toughest, fastest, deadliest, alien assassin around.

If you are blasting more space-invaders, galaxians or asteroids than anyone in your pub or arcade, this is your last chance to tell the world about your talent.

Whatever your favourite machine, send us in your best score and you could be on your way to the finals of the Best Arcade Player in the World Competition.

In conjunction with Taito Electronics we are trying to find the best galaxian-bliaster, puckman muncher, asteroid annihilator or invader halter going — and give him the acclaim he is due.

The competition is very easy to enter, simply fill in the machine you wish to enter on and take the form down to your local pub or arcade. Put the best score you can on the machine, ask the pub or arcade owner to sign it and send it off to us.

Should you find yourself producing a disappointing score simply try again.

The highest scores on the 10

Current world snooker champion, Steve Davis, has two loves. His first love is naturally enough the game of snooker which has brought him fame, riches and allowed him to indulge his second love — space invaders.

Steve is a keen player of arcade games and is often pictured relaxing between games to a snooker championship, by having a quick 20p's worth on whichever game the organisers of the event have been good enough to install close-by.

Since 26 January, Steve has been good enough to take time off from a snooker tournament to take part in our Best Arcade Player in the World Competition.

Steve will be along to watch the finalists in action — and maybe pick up a few tips on the featured games — and also take on the winner at the mystery final game which will be one not so far seen in the arcades of Britain.

Our guess is that Steve will have his work cut out but look forward to seeing him in action on the 26th.

CHAMPION PASS THE STEVE DAVIS TEST

most popular machines will appear in our Arcade Action section to give the rest of the arcade world something to aim. And the three top scorers on the three most popular machines we hear from by 7 January will be invited to take part in our Grand Arcade Game Final.

The finals will be taking place on Tuesday 26 January. Tickets will also be sent to the best runners-up to come along and enjoy the evening.

EMAP will pay all the expenses of the nine finalists to and from the event and, in the case of the younger finalists, the expenses of a parent as well.

Taito Electronics have agreed to supply the three machines which prove most popular, for our finalists to do their early battles on and they will produce a fourth mystery machine for the three winners of each section to contest the Grand Final on.

This will be a game new to the U.K. market. And it is on this machine that our Best Arcade Player in the World will immediately have to justify his or her title by taking on snooker champion and space invader enthusiast, Steve Davis.

Steve has quite a reputation as an arcade-gamster so it promises to be quite a tense tussle.

If you haven't already entered, make sure you don't miss out on your opportunity to take on the best in the arcade world and fill in the card and return it to us.

Are you a top arcade player

I would like to enter the Best Arcade Player in the World Competition.

ZX 80/81 HARDWARE/SOFTWARE

ZX KEYBOARD

A full size keyboard for the 80/81. The keyboard has all the 80/81 functions on the keys, and will greatly increase your programming speed. It is fitted with push type keys as in larger computers.

The keyboard has been specially designed for the Sinclair computer and is supplied ready-built. It also has facilities for 4 extra buttons which could be used for on/off switch, reset, etc. **£27.95**

4K GRAPHICS ROM

The dK Graphic module is our latest ZX81 accessory. This module, unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you 448 extra pre-programmed graphics, your normal graphic set contains 64. This means that you now have 512 graphics and with there inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there; it also has a spare holder on the board which will accept a further 4K of ROM/RAM. IT NEEDS NO EXTRA POWER AND WORKS FROM YOUR NORMAL POWER SUPPLY **£27.95**

RAM 80/81

16K RAM

Massive add-on memory for 80/81.

16K KIT-A-KIT VERSION

of a 16K Ram. Full instructions included. All memory expansions plug into the user port at the rear of the computer. 16K RAM **£42.95** 16K KIT **£32.95**

2K & 4K RAM

Static Ram memory expansion for the 80/81. They both work with onboard Ram i.e. 4K plus onboard = 8K. This is the cheapest small memory expansion available anywhere. 2K RAM **£15.95**. 4K RAM **£22.95**

16K 81 SOFTWARE

As seen at the ZX Microfair.

DEFLEX This totally new and very addictive game, which was highly acclaimed at the Microfair, uses fast moving graphics to provide a challenge requiring not only quick reaction, but also clever thinking. One and two player versions on same cassette. **£3.95**
3D/3D LABYRINTH You have all seen 3D Labyrinth games, but this goes one stage beyond; you must manoeuvre within a cubic maze and contend with corridors which may go left/right/up/down. Full size 3D graphical representation. **£3.95**

CENTPEDE. This is the first implementation of the popular arcade game on any micro anywhere. Never mind your invaders, etc., this is positively shining, the speed at which this runs makes ZX invaders look like a game of simple snap. **£4.95**

Please add £1 p&p for all hardware, Software p&p free. Specify ZX80/81 on order.

ALL OUR PRODUCTS ARE COVERED BY A MONEY BACK GUARANTEE

ITION COMPETITION COM

DELUGE US WITH GAMES

Only with your help can we continue to make *Computer & Video Games* a worthwhile purchase.

Our existence as a magazine depends on you, the readers, deluging us with games program listings which you have invented for your own micro-computer.

We are willing to pay £10 for each games listing published. Please check your programs carefully before you send them into us. I know the temptation is to look at our creations through gold-tinted spectacles, but, just before you run it off on the printer, check to see that if the biggest moron going tried to play the game (I may well do so when it gets to the office) he could do so without crashing it.

Another please now: Please do not send us programs that you have copied from professional tapes or spotted in other publications, these may be spotted by our eagle eyes or they may slip through and cause untold problems.

If possible could you include a cassette of the game so that we, as one of our review team, can try it out and give a rundown on just how good it is.

Each month we will be picking out a couple of programs and giving a briefing on how they were put together. What the variables are doing and how the

PARIS AWAITS OUR BEST PROGRAMMER

You could be in a position to treat a friend to a weekend in Paris — complete with spending money — next year.

That is the prize for the best games program listing sent into us in the first 12 months of this magazine's life.

Paris may not be the games capital of the world but it does have its attractions and, when you are spending our money, I'm sure it will be off too easy to turn what could have been "just another weekend", into the weekend of a lifetime.

Come next October a panel of judges will sit down to play all the best games which have been sent into us. They will take into account the originality of the game, the use of the facilities that particular computer has to offer, playability, programming prowess and presentation.

Just about anyone — apart from myself, can enter — and win the weekend in Paris. There is also the prestige of being hailed as a top games writer. Who knows where that could lead?

programmer has overcome certain problems with an idea that other readers could adopt to their machines.

So if you could also enclose with your listing, a brief rundown of how to play the game; whether it can be played by one, two or more people.

A brief synopsis of what the game is about will also be of

benefit, and a list of what the variables or certain subroutines are doing.

So whether you have written a massive adventure in 48K for your Apple, or a 1K bat and ball program for the Sinclair ZX81, we are waiting to hear from you.

I'm sure there must be plenty of easier ways to earn a tenner but are there any as rewarding?

BRAINWARE ANSWERS

The train was 22 minutes early in our second Mind Routines problem and the commuter and his faithful wife lived 11 miles from the station. British Rail have since informed us that it was actually the previous train 38 minutes late.

The solution to Nevera's December crossword is printed right. We will publish the names of the winners next issue.

The month's Brainware problems are on page 67.

A	S	T	E	R	O	I	D	B	E	L	T	S

COMPUTER & VIDEO GAMES' true competitions are open to anyone except EMAP employees and their relatives.

Entries to our Mind Routines, Nevera Crossword, Know your Creatures, Game of the Year and Arcade Player of the World competitions, should be sent to COMPUTER & VIDEO GAMES, Durrant House, 8 Harbet Hill, London EC1R 5JB. Judges' decisions are final and no correspondence can be entered into.

Send entries to Mind Routines on a postcard and in all cases please include a name, address and, where possible, a telephone number.

TION COMPETITION COMPI

TAKE TAITO'S INVADERS PRISONER

It is usually kill or be killed with the relentless Space Invaders, but we are now offering you a chance to take some prisoner.

An infinite number of these deadly aliens have been signed up to do duty on the Taito Electronics Space Invader machine which will go to the winner of our Know your Creatures competition.

The aliens will, of course, be safely locked away in a cocktail table, ready to do battle at a moments' notice.

Six creatures have already appeared in the last two issues of *Computer & Video Games* for you to put a name to. If you can also tell which machine these last three arcade inhabitants come from, you will be in the

running for your own Space Invaders table.

For those of you who missed the first two issues, we have reprinted the previous six creatures, to give you a chance to enter.

Simply fill in, beside each creature, the name of the machine you think he comes from. For example, if you think that creature "G" comes from a Puckman, Pacman or Mazeman machine, then simply write any of those words beside him and we will know what you mean.

When you have put names beside each creature, tell us, in not more than 25 words, why you think space invaders proved such a popular game. Fill in your name, address and telephone number and send it off to reach us no later than 15 January 1982. And Taito — the name behind the space invaders craze — could make your dream of a living room supply of invaders come true.

Be warned, though, that there are one or two sneaky creatures lurking in the line-up.

KNOW YOUR CREATURES/3

I think Space Invaders proved so popular because: _____

ENTER THE GREAT TEMPLATE COMPETITION.
SUPER PRIZES TO BE WON!
SEE THE COMPETITION PAGE IN THIS ISSUE FOR DETAILS.

THAT TEMPLATE!

If you've mislaid the free template we gave away with our December issue, you'd best start looking for it now.

Because that flexible strip of plastic has untold uses far beyond the one we innocently designed it for.

We thought it might be useful for keying-in the games listings we print in the magazine but offered prizes for the best other uses you could think of putting it to.

And after applying a good deal of imagination and some inspired lateral thinking you have proved that a good template is worth its weight in gold (about 10p).

We have selected a few bizarre examples at random for printing so you can begin to draw up a mental picture of your fellow *Computer & Video Games*

readers. (Mentol is probably the operative word.)

Our template can be used to:

- Break up the gungy bits which inevitably form at the bottom of a damp mug when you make instant cup soup.
- Repair squeaky bottles after the kids have been watching *Blue Peter*.
- Scraping mud from your legs after a game of football.
- Beetle flicker!
- Stop homing pigeons flying off by glueing their feet to it.
- Wear it on your nose in Alaska as an amorous eskimo repellent.
- For measuring how far your pet snail has travelled in the past six hours.

We will sift through the entries to pick out 10 winners for publication in the February issue. It promises to make entertaining reading.

A brand new addition to your family the ATARI personal computer

Powerful ATARI 400
16K RAM Measures
16" x 12 1/2" x 4 1/2".
Weighs only 9 1/2 lb.
Only **£345**
(incl VAT

INTRODUCTORY
OFFER

FREE 

**CASSETTE OF
INVITATION TO PROGRAMMING**
about 60 minutes of easy-to-follow tape
explaining the rudiments of programming
and links with the ATARI manual.
Supplied when you order a 400 or
800 Computer. Limited Offer.
Ends January 31 1982.

Now is the time to jump a generation and add an Atari to your family the best in personal home computers. So easy to use and programme yet they fulfil a vital role in the home. Just connect to your TV set for sound, colour, high resolution graphics and plug-in programme modes. Dad can play real or imaginary business games. Mum can swoon up on her languages for the next holiday and the

youngsters can play any amount of games or get help through the educational programmes. There is hardly any limit to what you can do with an Atari Personal Computer, and how this can develop. But there is a limit to the Free Introductory Offer of the 60 minute cassette which we will supply when you order an Atari 400 or 800 model. This offer ends January 31 1982.

ATARI 800 Advanced power and flexibility

48K RAM same size and weight as the 400 but has greater potential and advanced systems for those that require the extra for it.
Only £649 (inc. VAT at 15%).

ATARI Game Controls

Joysticks, paddle, and keyboards all readily available.

Have fun with ATARI TOO!

Play some of the most popular games

- ★ Asteroids
- ★ Missile Command
- ★ Space Invaders
- and many more

ATARI 410 Programme Recorder

For use with both the 400 & 800 models. Stores programmes and data, plus audio track. Run programmes, listen to voice or compose music through your TV set.

Never before computers had

e have so many d so much fun.

Thousands of computers have been programmed with new games featured in the new Computer & Video Games magazine.

The results have variously been hilarity, bemusement and profanity. But always fun.

Some of the games are simply crazy, others intellectually challenging. But all are straightforward to program with our step-by-step listings. You don't have to be an expert either because you can brush up (or even learn) programming with our regular workshop.

It doesn't matter what kind of computer you use our games cover all shapes and sizes from personal Sinclairs to mainframe IBMs.

If you have access to a computer, and you enjoy playing with it, you'll find something in Computer & Video Games to tickle your fancy. You can get the January issue now from all good newsagents.

So go on. Have some fun.

I would like to take out an annual subscription, I enclose a cheque/P.O. for £10/£20 (overseas add 10p per copy) to Computer & Video Games, Becton Court, Becton, Peterborough PE1 1DZ.

THE FOUR OCTAGONS PUZZLE

OUR SOLUTION

The programmed solutions to our first issue Four Octagons puzzle have been flooding in.

Some 300 had been received by the time this page had to be put to press. (And it was one of the first to go!) We have all been very surprised — and impressed — by the standard of entry and the amount of work many of you have done to.

The first program arrived on our desk within two days of the first issue appearing in the newsagents and subsequent solutions have come in with some marvellous pieces of presentation. From the hand written, to those that arrived complete with listing, tape and photographs of the display, all packaged in a neat file, they will all be tried and tested by our judges.

In the meantime here is a chance to see how puzzle setter James Dalgely of Pentangle, went about producing a program to solve the puzzle. It runs on a Pet but the program has been written, as far as is possible, using general Basic language.

IT IS often far easier to solve a "mechanical" puzzle than it is to either prove that the solution is unique or specify all the solutions.

However at Pentangle, where we specialise in manufacturing difficult puzzles, it is frequently necessary that we do both.

The first job is to analyse the puzzle: there are four octagons each of which can contribute one of two faces to any solution. Each face consists of eight pairs of symbols. I decided to split these into two groups of four pairs of symbols, so I could easily adapt the program for use on squares in the future.

The octagons have to be placed on a two by two grid, but as the puzzle is only to match the edges there is no need to consider rotations of the overall solution thus one card can always be placed on one of the four locations and the remaining three cards permuted on the three remaining locations.

For every permutation of card locations each card must be (a)

rotated and (b) turned over to test each of its 16 edges for a match against its two neighbouring cards. The total of 393,216 tests makes it necessary that the program is as fast as possible, but publication of the program makes it desirable to have graphics or a pretty picture.

I wrote the program for a 3032 Pet, but being frequently frustrated by coming across programs in magazines full of PEEKs and POKEs for machines other than Pets, I assume other readers get equally annoyed. So I ruled that I must not use PEEKs or POKEs in my program. This slowed it down and involved some rather untidy programmed cursor movements but hopefully made it more portable.

Lines 360-390 hold the data. Each symbol has been converted to a number from 1 to 7. (I started with card No. 1 numbering it clockwise and end up with four sets of alternate edges taken from the front and back of each card.)

Lines 110-130 define the vari-

ables in the order of the frequency with which they will be used. This is done to save machine time searching the variables.

Subroutine 710-850 is the explanatory preamble followed by an option in line 860-870 for users with a printer. (P\$ and F are solely related to the print option which gives hardcopy of only solutions, not pretty pictures.)

Subroutine 880-1130 provides the pretty picture. To save time it seemed sensible to overprint this with the current status as required rather than print it all each time.

This, in fact, led to the neces-

sity of subsequently using programmed cursor movements for the overprinting, but these were still quicker than printing the whole picture and also made it possible to get hardcopy of the essential data only on the Pet printer.

On the screen option the program waits before displaying a solution before continuing, whereas on the printer option, it continues automatically. To save time the current test is only shown on the screen when "G" is pressed.

Line 150 directs to the subroutines 400-450 and counts the positions 1-6.

Subroutines 400-450 read the

data into arrays A\$, B\$, C\$, and D\$ each containing the four sets of mutually exclusive symbols used in any one test. The six subroutines represent the six possible locations of the cards. Because numbers are being used for the symbols the cards have been renamed A, B, C, D, instead of 1, 2, 3, 4, to avoid confusion. The position is recorded in ARS.

Line 160 starts the loops which in line 170 select each of the four sets of edges that are to be used.

Line 180 starts the loops which rotate each of the sets of edges four times.

Line 190 skips out to display the current test if requested.

Lines 200-270 test for a match of edges and if a no match is found skip further matches and go to line 290 count the tests in N and rotate the cards in lines 300 and 310 and so on.

If all edges do match line 280 directs to the solution display and print subroutines.

Lines 460-480 either prints the solution or waits 'til asked to display it, using the same subroutine as the current test display.

Lines 490-700 are used to overprint the current test or solution onto the pretty picture. Edge symbols are shown in the octagons. The inner letters show the location of each card. The outer numbers show which set of edges is being tested (0 and 1 being on the front and 2 and 3 the reverse). The number of solutions and tests so far are shown together with the average time per test (this increases dramatically the more you look!).

On being confronted with the task of writing a program to solve the Four Octagons puzzle; my first thought had been "How easy!", my second was "How difficult!" and by the time I had finished I was convinced that I had set about the whole project in the most difficult possible way.

I have subsequently had a brilliant idea but as I won't be allowed to win the prize I will keep it secret unless of course I am adequately bribed!

I look forward with great interest to seeing how other readers tackle the puzzle on different machines.

CLEAN-UP AT THE RACES

HONEST JOE

A bookie's life is a hectic one and he needs to be shrewd and calculating — all eyes, ears and hands to make the most out of his business.

You can try it for yourself in a new game called Honest Joe.

Rake in the punters' cash from badly placed bets in a mock-up race — aim: to make a profit. Horses' form for previous races is given by the computer and randomly selected in each race. You must judge what bets to take.

A recent addition to the Molinera range of games software for the Tandy TRS-80 16K; you can buy it either in cassette or disc form, £8.75 and £11.75 respectively.

MOONRAIDER

Man the controls of a space cruiser on a bombing mission flying across an undulating horizon, to blast targets marked out on the landscape below.

You really need three pairs of eyes to watch out for targets on the ground, the hazardous horizon dotted with enormous mountains which come into view without warning, and the numerous alien craft which attack your ship.

There are four levels of skill for you to try your hand at plus sound effects which are emitted from the keyboard port. Moonraider runs on the Nascom and is a version of the arcade game Scramble.

It is produced by Program Power of Leeds and costs £8.95.

WILL SIMULATORS TAKE OFF?

JUMBO JET LANDER

You can experience the exhilaration of piloting an aeroplane while keeping both feet on the ground in Jumbo Jet Lander.

Learning to take-off, fly and land without leaving your living room is now possible with the latest piece of innovative software for the Atari personal computer.

Using marvellous graphics, this game is for the Atari 800 and simulates the cockpit of a jumbo jet.

Complete with hazards, both on-board and in the sky, it could almost turn into a recreation of the recent comedy film *Airplane*.

The screen displays a view from the pilot's seat and you can either select a daylight flight and landing or try the more difficult night-flight.

It requires a controlled mind as you take-in the information

from the many dials displayed before you. These register the condition of the aircraft throughout the flight, to allow pilot to monitor his air pressure, flight path, height and speed.

It takes some getting used to and it will be some time before you become experienced enough to land with any confidence.

In charge of the controls, it's your job to rectify anything that goes wrong in the flight period.

This game clocks in at just under the £30 mark and many purchasers may be put off. But the realism and graphics do offer a marvellous standard which other machines and software manufacturers find hard to achieve.

It is produced by Thorn-EMI's software arm and follows other games *Dart*, *Snooker* and *Submarine Commander*.

DANGER! BIRDS OF PREY...

FALCON

It's no wonder birds of prey are becoming endangered species, when they are shot down as fast as they are in *Falcon*.

This version of the arcade game *Phoenix* is another space invasion game, putting the player up against impossible alien odds.

Fighting off the *Falcon* in this new Apple game is a hard task which has three separate stages to test your tactical ability and marksmanship.

The first and second phases of the invasion involve the same

version of these malicious bird-like creatures. In the third phase a new and more deadly variety takes over the attack.

And should you survive this onslaught, a mothership appears, to drop hundreds of *Falcons* on you.

Falcon costs £18.95 from S.B.D. Software but the different levels of difficulty will keep up a player's interest.

SUPER GLUE GALAXIANS

MARTIANS

What do you get when you cross galaxians with super glue? The answer can be found in Program Power's *Martians* game.

A metal-clinging species of creature lurking in the depths of outer space is the evil force at work to destroy your galactic cruise!

If the aliens build up on the outside of your own ship with six clinging on to it they overcome the controls of the cruise! You lose the game and they take command.

The game is said to be inspired by the space adventure series *Blake's Seven*. A forcefield surrounding your spaceship is at your disposal for defence purposes. When the field is down, the aliens can make a bee line for your craft. Beware though, your forcefield is not always strong enough to protect the ship.

Some of the sticky creatures are imposters in the swarm which can be deceiving. Just when you think you have stopped the aliens, an imposter will descend disguised amongst the rest of the mob. These suddenly transform into creatures which can penetrate your forcefield regardless of its strength.

The game's points system works on the number of aliens you prevent breaching through the forcefield.

Martians is written for the Acorn Atom and a copy in cassette form costs £7.95.

GAMES NEWS

A HOBBIT'S MISSION

The classic Tolkien tale *Lord of the Rings* comes to life on your television screen in a new adventure game.

The *Cracks of Doom*, is based on the story of the adventures of Frodo described in the classic fantasy book and runs on a 32K Pot. There are five objects for you to find by interrogating the computer, using command words to tackle obstacles put in your way.

When you find all the objects though, your task is not over. You then have to locate the *Cracks of Doom* and drop each item, in turn, into the crevasse's depths.

CRACKS OF DOOM

Only once the objects have hit the bottom, do the Gods reward you.

Hazards encountered on your perilous journey include canyons which you must take care not to tumble into, and evil creatures blocking your path which you have to deal with as well as a poor hobbit can. If you pick the right thing to do, the game goes on - if not you're dead!

Recently brought out by Supersoft, the *Cracks of Doom* was written by the same author of the successful adventure game *Hitchhiker's Guide to the Galaxy* which has fascinated Pot owners the length and breadth of the country.

Anticipating a large demand for the game, Supersoft have brought it out on both tape and disc with a price tag of £16 attached.

SEASONAL SING-SONG

CAROLS

Tune into Christmas with a Carol cassette to add to the seasonal festivities.

The Carol tape runs on the Sheep MZ-80K so you can load and listen to up to 20 different popular carols. For £5.50 all your old favourites are on the cassette including *Good King Wenceslas*, *White Shophoids Watched These Flocks By Night*, *Once in Royal David's City*, *Ding Dong Merrily on High* and *D Little Town of Bethlehem*.

It's on sale now from Sheep software specialists Newbeat. Other additions to its Sheep

range are *Quadrax*, an imitation of the traditional game, *Four-in-a-Row*. This version is in 3-D and the object is to get four of the same coloured counters slotted in one row. You play against either the computer or human opponents. For those who can think in 3-D it costs £5.50.

A space invader spin-off is out as well. Called, *Cosmoad from Newbeat*, it follows the traditional game but is more difficult because the invaders are more mischievous than other versions' invading forces. It too runs on the MZ-80K and costs £5.

LIFTING A MAGICAL CURSE

DRAGON'S EYE

A new mysterious and complex adventure game of necromancy looks certain to keep Pot owners company in the long nights.

So complicated are the rules and sections of the game that a 32 page booklet comes with the pack. The real history behind the theme of *Dragon's Eye* is surrounded by the mysteries of a magical art, necromancy.

A curse was put on a land known as the Seven Provinces by the Evil Necromancer, who held the power to control time. Only the player, by entering

and taking part in this fantasy, can wipe out the spell woven by the Evil Necromancer.

At the end of the game, no matter how far you have got with it, you will be awarded points. If you get the honour of receiving less than 100 you know you are terrible. To achieve the wreaths of distinction deserved only by a grand master you need to earn yourself the grand total of 4000 to 5999 points. No mean feat. Supplies for this and an Apple version is Algray Software; it costs £16.95.

CHILDREN'S NURSERY FANTASY

This month marks a departure from traditional adventure games filled with demons, dragons, wizards and warlocks.

Specially written for children the new adventure game *Dreamworld*, sets nursery rhymes as the scene of action.

Using well-known nursery rhymes, children too can get to grips with adventure before mov-

ing on to the more advanced and complicated versions on sale. And all in the relatively peaceful

DREAMWORLD

surroundings of children's fantasy world using simple command words to tell the computer what to do.

The Tandy TRS 80 is the machine this adventure game runs on with 16K of memory. It is available from TRS-80 suppliers Malvern of Bexhill-on-Sea for £8.75 on tape and £11.95 on disc.

For adult and experienced adventure players the firm has expanded its *Mysterious Adventure* series *Time Machine* and *Arrow of Death* of which a second part is to follow later. The latter is a continuation of the first Malvern adventure, the *Golden Baton* in which the object is to recover a stolen baton and restore it to its rightful place in the *Arrow of Death* (I) the baton has grown tarnished and has been overcome by an evil power whose source is unknown. Your task is to find and banish the source.

Both cost £8.75 for the tape version and £11.75 for the disc.

ingenious!

That's the only word to really describe this microcomputer system. The home compatible with the TRS 80 and ideal for enthusiasts, especially the converted.

Genie has now been upgraded to Genie I, incorporating all of the original excellent features, but with the addition of:
 • Extended BASIC including REMINDER and SCREEN PRINT
 • Full upper and lower case, loading error and auto-repeat on all keys
 • An internal SOUND UNIT to add a new dimension to your own programs
 • A MACHINE LANGUAGE MONITOR, with Display, modify, enter and execute (with break) options
 Genie I has all of this plus the built-in cassette deck, 16K RAM, 128 ROM with BASIC interpreter, full size keyboard, an unusually wide range of new and updated peripherals and usually 2000's of pre-recorded programmes available. Yet, almost unbelievably the price of Genie I is even lower than that of the original Genie.

The superb Genie computer which is all-in-one, hobbyist.

New!...Printer

The EG 902 printer can be connected to the Genie either through the expander or directly into the computer using the Parallel Printer Interface. It is a compact unit, with an 80 column, 66 T matrix print out, operating quietly and efficiently at 30 characters per second.

Ingenious for business

The Genie II is a major breakthrough for small business computers. Retaining all the advantages of Genie I, including low price, Genie II adapts perfectly to commercial functions with the following features:

- Full size keyboard
- Four audible definable function keys
- Extension to BASIC

- Basic business commands
- Fully expandable with the same peripherals

Disk Drive

As well as the obvious advantages of mass storage, the addition of the disk system to the Genie means much faster access to other languages and full random access file handling. Up to 4 of these 40 track drives can be used on a system.

New!...12" Monitor

Now achieve a 12" monitor giving a clear easy to read image. The updated EG10 has a new green phosphor tube.

New!...Expander

An updated Expansion Box (EG 3044) is a major feature of the new Genie I system and will ensure all the possibilities allowing for up to 4 disk drives, with optional double density II, conversion to a printer or RS232C interface or SIO cards. There is 5K RAM fitted and it has a new low price!

SPECIAL TECHNICAL GENIE HOT - LINE ON 0629 4995

for all your technical advice and service back up on any aspect of the Genie system direct from the experts!

For full details and demonstration of Genie I Genie II or advice on any aspect of the system, a free call to your local dealer or write directly to the sole importers at the address below.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCT GAMES NEWS

MISSION OF DESTRUCTION

Guide a crew of World War II submarine men through a dangerous mission into safety as the commander of the vessel.

In a war game simulation, the submarine commander is in charge of carrying out a mission seeking out enemy ships and destroying them. Frenzied attacks on merchant convoys have to be carried out too, but even these are not easy targets as they are often surrounded by an armed escort of naval vessels. In the submarine itself are all the vital dials and pressure gauges found in a World War II submarine. There's a radar to track down the enemy's position so you can prepare your attack and a periscope to survey the scene above the waves after an attack.

Sub Commander runs on both ZXK and 16K Pats and is available now from Birmisley based soft ware firm Algray Software for £13.95.

FLIGHT INTO DANGER

Pilot a plane through the tight sky armed with laser beams and a hold full of bombs.

The object of Pegasus II is to defend your aircraft from an enemy force attacking you with four types of alien creatures and craft. At the same time you have to navigate your way along a hazardous route which contains objects and dangerous missile bases to blast at your vessel.

You set the landscape by heightening mountains to fly over. There is a refuelling manoeuvre when your gas runs low, taking the plane through metal sensory satellites until you reach the redocking stage.

Pegasus II runs on the Apple with 48K of memory. It was written in the US and has recently been brought over to this country by S.B.D. Software and costs £17.95.

BREAK THE COLOUR CODE

Pit your wits against the computer in a test of mental agility to crack the computer's code.

The old favourite Mastermind has got another run for its money, this time on Commodore's latest machine, the VIC-20. You either have the knack of playing this logical guessing game or not but if you do, you'll find it converts well to the VIC.

You select between five and nine guesses at breaking the colour coded problem set by the computer. The code is made up of four variables and there are two columns on the right hand side of the screen giving the clues to the accuracy of each guess.

WANTED: A UNIVERSE SAVIOUR

Space Invaders on the ZX81 can be just as challenging as on other machines with more sophisticated graphics.

This recent addition to the Essential Software Company's ZX81 games range emulates the classic Space Invaders format and runs in 8K.

The player's task is to defend his own ship from scores of rapidly descending galactic crea-

tures whose sole aim in life is to destroy you and take control of the Universe.

The shoot button is the 0 or 1 key on the board and the directional control keys are the numbers 5 and 8. Altogether you get five laser base lives, so each time one of your lasers is destroyed it reduces your total power.

If you laser base is wiped out quickly, the picture on the screen freezes for a second and then the game flicks back to the beginning for an automatic restart.

If you lack a space invader game in your ZX81 games library, now's the chance to rectify it. Copies are available from The Essential Software Company for £6.00 each.

SENSING VICTORY

As electronic chess grows in popularity new games are being brought out at lower prices to give more enthusiasts a chance to tackle computerised opponents.

An addition to the Challenge range of games is Mini Sensory Chess Challenge. It's only 21 x 11.5 x 5 cm in size, so it can easily find a resting place in the home or office.

The sensory surface of the board means a keyboard is not needed. When the pieces are pushed onto the board the game's memory takes over. It recognises each chess piece when it's moved and stores away information of where each piece is placed.

The capabilities of the mini game are soon to be expanded with the introduction of plug-in modules. Scheduled for release are an advanced chess program, popular book openings and famous chess games which players can try out for themselves.

The game is fairly hardy coming in a tough plastic casing and costs £54.95 from Computer Games distributors. It either runs off batteries (not supplied) or can be run off a mains transformer.

CHESS

LOOKING at computer errors reinforces a sense of human superiority. In the chess field it is also of value to those developing their own programs.

It is certainly not unknown for a program to lose by attempting to make an illegal move, such as a Pawn's initial "double" move when the intervening square is not empty!

A particularly bad case of an illegal move occurred in the first European Computer Chess Championship which was played in Amsterdam in August 1976. In the second round, Orwell reached position (A) against Tell.

Orwell (White), to move, next advanced the Queen's Bishop Pawn to the eighth rank and obviously has a trivial win. Unfortunately Orwell neglected to make any pronouncement about the promotion, i.e., whether the Pawn should be changed to a Queen or some other piece. Strictly, the arbiter David Levy (an international chess master) should now have forfeited White on the grounds that it could not play a legal game. Orwell went on to win.

The sequel does, in fact, support Levy's ruling. It is clear that Orwell did not regard the offending Pawns as promoted to Queens and, perhaps more surprisingly, Tell obviously did not either!

Since 1970, the Association for Computing Machinery (ACM) has sponsored an annual United States (later North American) championship. In the first of the series, played in New York in 1970, the following game was played between Tony Marsland's program (White) and J. But (a program written by U.S. master Hans Berliner — the name stood for Just Because It Is There).

1. P-Q4, N-KB3; 2. P-Q4, P-K3; 3. Q-Q3? (developing the Queen much too early), N-B3; 4. N-KB3; P-Q4; 5. N-K5? (unnecessarily moving the same piece twice at an early stage, and losing a

By Max Bramer

In last month's article I gave examples of two appalling blunders made by the program named Albatross in last year's first world microcomputer championship. This month I am returning to the topic of errors: major and minor, straightforward and subtle.

At first glance, it might seem surprising that a computer — a supremely logical device — could ever make errors in a non-chance game such as chess. However, this is far from true.

Pawn), PXP, 6. QXP (B4), B-N5ch (6... QXP wins a Pawn at once); 7. B-Q2, BXBch; 8. KXB? (the worst move, losing a piece for no reason), NXN; 9. Q-B5? (again, the worst move, losing the Queen), N-K5ch; 10. Resigns! After 10... NXQ all White's developed pieces would have been captured. The explanation of this weird game is probably a programming bug which caused the program to prefer positions where it was as far behind in material as possible!

Position (B) was reached a year later at the second U.S. championship in Chicago. C.C.C.P. (White) has completely outplayed David (Black) and has a simple win, but it had not been taught to avoid repetition.

1. R-N1ch, K-R4; 2. R-B5ch, K-R3; 3. R-B6ch, K-R4; 4. R-B5ch, K-R3; 5. R-B6ch, K-R4; 6. R-B5ch and

Black was able to claim a draw.

More difficult to avoid is (C) Kaisa v. Chaos, first computer championship, Stockholm, 1974.

Here Black should probably castle queen-side, with good chances. However, the program gave high value to positions where the King was surrounded by its own men "for safety". In this case, this objective led Black to totally weaken his position by 1... K-Q2? a misapplication of a perfectly reasonable rule after which Black may well be lost.

The last example (D) is a famous one, which could only have been played by computer. For seven moves, White has a mate in one, but is in no hurry to play it. A mate in two is almost as good, and so the checkmating move is continually postponed. Black meanwhile manages to advance a Pawn, promote it and eventually even wins the game. Played at the second U.S. championship: Coko III (White) v. Genie (Black).

White can, of course, checkmate by Q-N2 and the same comment applies for the next six moves. However, the game continued:

1. K-B1, P-KB4; 2. K-B2, P-B5; 3. K-B1, P-N5; 4. K-B2, P-B6; 5. K-B1, PXP; 6. K-B2, PXR=Q.

Explicitly, White now makes a more serious blunder. The remainder of the game is horrible.

7. K-B1?? QXBch; 8. K-Q2, QXPch; 9. K-B1, Q-N8ch; 10. K-B2, QXP(R7)ch; 11. K-B1, Q-R8ch; 12. K-B2, Q-QN8ch; 13. K-Q2, P-N6; 14. Q-B4ch, Q-N6; 15. QXQch, KXQ.

White is now lost, but should at least play K-K2 to stop Black's Pawn.

16. P-K4? KXP; 17. P-K5, P-N7; 18. Resigns.

Is it better to "maintain" a threat or to execute it immediately? There is no simple answer; it depends entirely on the position.

I shall return to this problem next month when I consider the so-called "horizon effect"

BRIDGE

THE bid to produce a microcomputer able to play a respectable game of bridge has proved an uphill task. The fact that a game of bridge is split into two parts, bidding and playing a hand, poses the programmer very different problems from the game of chess.

The first commercial attempt available in this country was Fidelity Electronics' Bridge Challenger, marketed over here by Computer Games.

Playing a simple bidding system, the Mark I machine (originally selling at just under £300 before being superseded by Mark II) was a very good first attempt at the problem. Considering the man-years (man-centuries?) that had been put into chess-playing machines, a lot had been achieved for bridge in a very short time.

The Bridge Challenger had a lot of interesting features. It could play one, two, three or four of the hands (with humans making up the numbers) and was completely ethical — in other words if it happened to know both the East and West cards on a particular deal it would only attempt to solve the problems that it was set (in both bidding

BY ALAN HIRON
and play) with the information that it knew legitimately.

There were a number of optional features that could be included in the bidding system used (weak or strong no-trump, five-card majors and so on) that made the system usable on both sides of the Atlantic where bidding methods vary considerably. Hands could be dealt with a special pack of magnetized cards and read into the machine without the human players seeing their faces, hands could be replayed and so on.

This was all very satisfactory but by no stretch of the imagination did the quality of the bidding and play live up to good human standard. Although there were one or two enlightened reviews, the majority of bridge correspondents tended to sneer at the machine's sheer lack of bridge ability.

As an exercise, the computer was set to work to compete in "Bidding Challenge", a monthly competition run by Bridge Magazine between the current holders and the new challengers. It achieved (somewhat lucrily) a score of 47 out of a poss-

ible 100 with its human opponents collecting an average expert score of about 80.

There were noticeable weaknesses in the play as well as the bidding and players muttered about the time taken to input a hand, either by reading the cards or by using the keyboard. To a large extent these difficulties have been overcome by Mark II. The bidding and play have improved and there are a large number of pre-dealt hands that can be generated with only a few key depressions — obviously a good idea.

In my next article I will give one or two examples of how Bridge Challenger copes in practice. Furthermore, it has a new rival on the market — Bridgemaster. A short challenge match between the two machines should prove revealing...

A new idea, shortly to be released, is for a visual form of the old Auto-Bridge. This is not a playing machine, but simply a tape or two for a particularly well-known home computer that tests your expertise in both bidding and play. And the graphics really are rather fun — in glorious technicolour.

FOR SO LONG, A BRIDGE TOO FAR

The social side of Bridge has encouraged a vast following but not the computerisation which chess players have craved.

In Britain, far more people play bridge, even if only occasionally, than play football or cricket and it is even more popular in the U.S.

I first played around with a computer to play bridge in 1959, but it was a massive water-cooled Mercury and results were long and slow in coming.

In the 60s the problems of getting a machine to play a full game seemed intractable but computers were developed as a short cut to cope with the scoring problems involved in big simultaneous pairs events, played at perhaps 200 centres and where all players tackled the same 24 hands.

It involved some complications in

those early days which I will repeat to show how lucky we are to have microcomputers around today.

I played in the very first on-line scored tournament in Ostend in 1964. An IBM machine, special score cards and magnetic pencils were used.

Each scorer marked the card in a special way and the cards subsequently read directly by a card reader. Theory? Excellent! In practice? Disaster? Bridge players, who traditionally never listen to any instructions that they are given, managed to strike out the wrong digits on about one card in two. The eventual manual checking and repair work needed to get everything right took about four times as long as if the event had been scored manually from the word go.

The next idea came from Australia.

To prevent people losing their nice magnetic recording pencils and using any stray pen that came to hand, the score-cards were conventional punch cards but with ready made perforations around every digit that might need to be punched. The idea was that any implement could be used to poke out the hole on the card and so register a score that could be read directly.

A big improvement, yes, but players still tended to continue their post-mortems of their most recent disaster and pay insufficient attention to the task in hand. Extra holes were absent-mindedly included — it is great fun pushing out a perforated hole with a pen — and the computer found it remarkably difficult to score a contract of 23 hearts, making 18 tricks — hardly surprising

ARCADE

There's a spark of genius behind the new arcade game which is taking America by storm.

Titled Qix (and pronounced kiks), the most remarkable thing about this new game is that it is not tied to any theme. It is a strategic game, pure and simple, with no compromising to make the player think he's saving the Earth or competing in a Grand Prix.

The only thing you are battling in Qix is electricity. It is a game of line drawing, snatching space across the machine while avoiding the many hazards.

To begin with, the screen consists only of four borders down which travel two "Sparks". The

A SPARK OF GENIUS

player is in charge of a marker at the bottom of the screen and to escape the Sparks he must draw a line upwards into the screen.

The problem is that while drawing, the marker is vulnerable to the Qix, a large brightly coloured, randomly travelling spark. If you hesitate in mid-line, you run into the third villain of the piece — the Fuse. A box which is too long being completed will mean the Fuse is lit at the place where the marker left the established lines and rushes up to destroy the hesitating marker. Those are the hazards, now for

the aims. In Qix you have to fill in as much of the screen as you can before one of the hazards does for you. 75% of the screen filled, results in a new screen to tackle.

You can either draw in fast mode or risk the slow mode for double points.

Gradually small boxes fill the screen with tiny lines to dodge the sparks on and next step is a desperate dash to the side to complete a space capturing box.

Just as the player feels he is getting on top of the Sparks, they multiply and become more dangerous and aggressive.

There is one final danger of a careless player's own making. This is known as the spiral death trap and is caused by a player cutting in on himself too soon — at the first hint of a wrong turning, the Fuse is lit and ready to chase the offender down.

Each player will develop his own ideas on strategy and this will be mirrored in the type of space filling designs he produces. This is a basic outline of the game — we will do more on facts in a future issue.

US successes are not guaranteed to do well with British players — but there is a strong lobby predicting that Qix will catch on like lightning over here.

CHOPPERS AND TANKS FOR TWO

The odds are really stacked against the defender in Armour Attack.

Panzers are prowling the streets, helicopters hover dangerously overhead and your jeep is the only thing that stands between the town and the occupying forces.

Tanks are an increasingly common inhabitant of our arcade machines. While Armour Attack does not compare visually with the excitement of Battle Zone, it does offer plenty of scope for round-the-houses manoeuvring and encourages guerrilla hit-and-run tactics from the defender.

The jeep can make quite a dent in the hardware which is grinding through the streets.

The game lends itself to the two-player mode with a second jeep appearing and allowing the players to join forces to defend the town. Individual and team scores are kept in this case.

Tanks must be hit twice to be completely destroyed. The first hit from the jeep merely immobilises the enemy and scores 20 points for the player. A second hit destroys the turret and is worth an additional 30 points.

For each helicopter destroyed the player gets a bonus of 10 points on every tank he finishes off. And after five helicopters are shot down the player receives an extra jeep.

As the game progresses the tanks and helicopters get faster and become more difficult to pick off.

A good tactical game but ignore the manufacturer's claims of 'unprecedented realism'.

SHUTTLING OFF THIS MORTAL COIL

A small step for man turns into a journey not to be contemplated in Moon Shuttle.

Conquest of space was this tough, America's shuttle would be put back under wraps immediately. The main trouble in this game is that the Prince of Darkness has set up his forces between you and the moon with the sworn aim of preventing anyone reaching there. He is helped in this by a meteorite storm which travels across the screen and has to be crossed by your craft.

Blasting a pathway through the meteorites is only the start of your problems, though, as the Prince of Darkness' troops, consisting of such horrors as Blob Men, Moai-Wai and Bomb Launchers, do their best to keep the moon uninhabited.

Good colourful graphics but the Apollo mission never had it this tough.

YOU CAN'T KEEP A GOOD FROG DOWN

A frog is back in the arcade news in one of the strangest game concepts currently going the rounds.

Frog and Spiders puts the player in the amphibious title role in a real tangled web of wildlife drama.

The frog develops from a ted pole quickly to take up position at the bottom of the screen while spiders weave a massive web above him. Using the fire button the frog must shoot down the spiders, once to knock them down, twice to kill them. The spiders fire back, naturally, but a bigger danger is the snake who slithers out along the bottom of the screen and will bite the frog unless the creature can jump over him.

But don't hop into a bee on your way up as this also spells disaster. On these jumps you can earn bonus points for eating a spider. More points can be gained on these aerial excursions by delousing dragonflies and butterflies caught in the spider's web.

But there is a 100 point penalty if you hit a butterfly or dragonfly by mistake.

A pesky squirrel adds to the action by appearing on a bough above the web and sending down an acorn bomb to further confuse proceedings.

A control level, fire button and jump action are the only controls you have to master but working out the game itself is a real test.

It's a revelation to discover just what is going on in your local bypond.

BUTTONS GALORE

DEFENCE IS THE KEY

Newcomers to Defender do not realise how apt the title is, for unless you protect the humanoid who inhabits the planet's surface, your own demise follows swiftly.

When the last of the 10 humanoids you must protect, is taken to the top of the screen by a Lander craft, the screen gives a definite shudder and the entire alien attack wave descends on you at once — even the best Defender players soon lose lives in this situation.

Each batch of humanoids must be protected for four attack waves before another 10 are placed in your case and they are worth much more to the player than mere bonuses.

The six alien craft that inhabit the Defender machine are, in reality, only four. The last and deadly Mutants are Landers that have fulfilled their mission of taking a kidnapped humanoid to the top of the screen.

The Swarmer are the remnants of an exploded Pod Bombers, which with Landers, make up the bulk of any screen's attack force, send space with small bombs which can be unwittingly flown into.

And finally Bitters, the seemingly unshakable green U.F.O.s, whose main purpose is to keep the player on the move. Any delving and one of these horrors

Many an arcade player has written off Defender as requiring one more hand than the usual human complement.

Its awesome array of buttons and deadly collection of six alien craft seem to defy mastery. And

will be despatched to prompt the player to speed up.

In Defender some of the action takes place off-screen on the radar axis. Many players mis-use this feature as a way of lining up their next alien victim, it should be used to keep a check on any Lander trying to smuggle a man off the surface.

Three smart bombs are given to the player at the start of the game and one more, plus one more life, is added with every 10,000 points scored.

These should be saved, if possible, until the beginning of the third wave, then the high scoring Pods are waiting in force and all can be destroyed complete with their Swimming cargo by one bomb. Note if only one Pod is on the screen when the bomb is detonated its Swimmers will be released.

Hyperspace is seldom used as it is very hard to find in a panic. But if you do use it and find yourself materialising in a situation just as deadly as the one you just escaped from, it is possible to press the button again before you have fully materialised.

Humanoids being lifted off the planet's surface should be the prime consideration. If the kidnapping Lander is shot before he gets too high, the man falls safely back to earth.

TIPS

Yet those who have persevered with Defender are the most devoted of players, swearing by the game as the most complete and satisfying tactically.

All this may sound like heresy to those of us who spent a small fortune on the game and came away short-changed on time and none the wiser on its winning ways.

The fact is Defender does not tolerate learners easily. While space invaders could be played and enjoyed without an understanding of the tactics, Defender comes across as a blur of action, culminating in unavoidable death at the hands of a whole collection of seemingly battal equipped alien craft.

Followers of the game have already given this column a taste of their fervour with many requests to feature the game in the "Tips" section.

The most interesting "bug" we have been told about on the machine comes courtesy of M. Healey who claims:

When you shoot a Lander and rescue the humanoid under your ship it is not always necessary to put him down. You can continue saving and storing the men under the ship until you have six or seven under there. This will produce some interesting effects when all six are put on the ground — like some men appearing at the top of the screen, making Bitters (the fast green U.F.O.s) disappear and having the effect of "hyperspace" on your craft and other things on the screen.

STREET TALK

Perhaps it is a sign of the concentration needed to play Defender that very few sayings connected with the game were brought to our attention.

The only two we overheard were:

- One to hang onto — referring to the all important fast humanoid who can be collected under the craft to prevent him being grabbed by the Landers.
- Mountain hugging — the tactic of flying low just above the horizon to blast Landers before they take captives too high.

SPEED RACE RUNS ON A TEXAS

INSTRUMENTS 99/4

WRITTEN IN T.I. EXTENDED

BASIC by Stephen Shaw

SPEED RACE

Dear Sir,
 Glad to see your mag. Although you carry programs for almost every type of competition, you missed the T.I. 99/4 now selling faster than T.I. can impact it. Sales will shoot up when the modified 99/4s get in — so watch for it. g

To rectify your omission I enclose a sample program written in T.I. extended Basic. This makes use of Sprites, smoothly moving characters, & imitate the Sega game Monaco G.P.

PROGRAM DOCUMENTATION

Up to line 120 sets direction of other cars.

Lines 130-140 define special characters.

CHAR 100 is the cars, 110 is the road edge, 105 the crash barriers. CALL SPRITE initiates the sprites, with sprite number, character, code, colour, initial positions and initial velocities.

Sprites 6 upwards are the crash barriers.

Line 333 sets the colour of the road, down in line 332.

Line 325 sets the colour of the road, edge, down in line 334, also defined in line 334

Lines 340-350 indicate the four opponent cars. 370 initiates your car. You can be stationary, as are the others, at this stage.

The core of the program is 390-520. CALL COINC. checks around, discovers if two sprites are overlapping at that exact instant. If they are, you go to the crash routine from line 300. 470 increments the time & distance. 490 causes the opponents' cars to weave from side to side at specifically timed intervals. 500 makes them move.

440 moves your car left & right if arrow keys are pressed — movement continues until 420 is reached again; internal timing is such as to naturally stop car just on road on left and on hard shoulder on right.

To cheat, crash your way to the right hand side of the screen and stay there!

310 stops all motion while crash calculations take place.

330 invokes penalty.

832/833 will bring game to end after 15 crashes of 200 time units — but note this section is only reached after a crash!

935 and 936 restore original conditions re. opponent car movement

940-960 put opponents back in place.

RUNS ON AN ATARI IN 8K

CHANGING HEARTS

Anyone who had a heart would not have invented this puzzle game. Simple to play yet challenging to work-out, Changing Hearts is an unusual problem which is well suited to the computer.

The object of the game is to change a pattern of dark hearts surrounding a light coloured one to a pattern of light hearts, surrounding a dark one.

As you select individual hearts, different groups of hearts will be complemented depending on your choice. Selecting a corner will change four hearts in a square including that corner. Choosing a heart at the middle of an edge will reverse all hearts along that edge. Finally, if the central heart is chosen, all hearts in a cross will be switched.

The first challenge is simply to solve this puzzle without losing any hair. A higher challenge is to solve it in the fewest moves possible. Supposedly, this number is eleven. If at any time you wish to return to the starting position, press the letter 'T' (initialise). This will cost you a turn, however.

You can save yourself a lot of typing from omitting the instructions (lines 1000-1110), and deleting line 60.

Of interest to programmers will be the extensive use of strings to hold integer numbers (0-255). There are a number of good reasons for doing this. First, a single character in a string requires much less memory than a number (two bytes compared to seven). The numbers can be retrieved easily using Atari's string splitting convention (see line 900).

String comparison is also useful for comparing entire groups of numbers at once. Notice how easy it is to check for a win or loss in lines 250 and 260. The numbers are entered into strings as control graphics.

Many lines in "Changing Hearts" contain special control characters which DO NOT show

up in this listing. To enter these special characters, hold the control key down while typing the upper case letters and the commas below:

Line 30: P\$ should contain
HCJCLCHEJELEHGJGLG

Line 40: G\$ contains ABDE,
ABC, BCEF, ADG., BDEFHCFI,
DEGH, GHI., EFHI.

Lines 410-440 contain graphics in their PRINT statement as follows:

Line 410: QRWRWRE

Line 420: ARSRSD

Line 430: ARSRSD

Line 440: ZRXXRC

In lines 1000 and 1010, there should be two control commas (heart characters) in each line PRINT statement. The first one after the open parenthesis character, and one before the closing parenthesis character, and one before the closing parenthesis. The first heart in line 1000, and the second one in line 1010, should also be typed in reverse video, as should the word "light" in lines 220 and 1010.

PROGRAM EXPLANATION

Lines 10-40: The keyboard is opened for input to get keys without requiring a RETURN. Various strings are initialised. See the instruction for special comments concerning P\$ and G\$.

Lines 50-60: Title — The hearts blink in and out because of the POKEs which change from upper-case to lower-case graphics mode and back (POKEs into 756).

Lines 170-180: Initialise game — The board is printed along with the initial heart configuration.

Line 190-270: Main loop of game — Gets player selection, checks for legal move, flashes appropriate group and complements hearts in that group, checks for winning or losing situations and repeats. CHR\$(125) clears the text area.

Lines 300-310: Advises of a losing condition.

Lines 350-380: Acknowledges a win, small demonstration, asks if repeat wanted. The POKEs into 708 are another way to change colours (colour register 0). The POKEs into 656 and 657 align the cursor in the text area (row and column). The POKE into 76 clears the last key byte.

Lines 400-450: Subroutine to print the board. The SETCOLOR 4,2,8 is necessary so the background hearts in graphics mode 2 don't show because they are the same colour as the background. The SETCOLOR 3,4,10 makes the light hearts especially light so they show up well on a black and white TV. CHR\$(124) creates the vertical lines, completing squares. The POKE into 752 blanks the cursor.

Lines 500-550: Subroutine to put hearts on the board. Flag F controls the configuration printed as described under variables.

Lines 600-620: Subroutine which flashes hearts in a group determined by the number selected, N. The subroutine then complements these hearts.

Lines 700-730: Delay subroutine used during instructions and in winning and losing routines. Delay determined by point where entered.

Lines 750-770: Keyboard input subroutines which prompts and waits for any key to be pressed.

Lines 800-850: A subroutine which operates on a group of positions determined by the number N. Hearts may be printed, erased or complemented depending on the flag F.

Line 900: Subroutine to retrieve screen positions from string P\$.

Line 1000-1110: Instructions

TANK BATTLE

**RUNS ON A
SHARP MZ-80K**

Stalk your opponent's tank through the minefields and barriers of the Sharp MZ-80K battlefield.

In Tank Battle, two tank commanders guide their war

machines around the screen waiting for an opening to fire or to force their opponent over a mine.

Points are scored if you hit the opposing tank and if your opponent sets off a mine. The winner is the first to 10 points. Barriers can be destroyed by two direct hits to force your way through to surprise a hiding opponent.

Each player controls his tank from a 3x3 section of keys at either end of the keyboard. The eight outside keys give direction and the centre key fires a shot in the direction of the last move.

Tank conflicts have proved a successful convert to the computer screen — and this game by Alistair Hutcheon incorporates most of the features of that success.

We can all help if we care enough...

A
Special
from
Educational
Computing

Many people regard computers as some form of man-made monster, heralding the advent of an era where machines are the masters of men. The emergence of microcomputers in the mid-seventies has helped to overcome this misguided view of how computers will affect our lives.

Each month, Educational Computing shows the tremendous advances being made in the enhancement of computers, particularly micros, as teaching aids. In this annual issue, **Learning to cope — computers in special education**, we look at the marvellous achievements of many very dedicated people working with disabled and

mentally-handicapped children.

Tremendous progress is being made in this area, brought about by a mixture of ingenuity, flexibility and determination on behalf of the manufacturers of specially-adapted products, writers of applications software, nurses and teachers putting ideas into practice and the children themselves.

In our annual, we look at the latest developments in special education. You can read about the many fascinating applications of microelectronics in this field, what the people involved think and what the future holds in store. Most important of all, you can find if you can help — even in a small way.

Learning to cope — computers in special education £1.50

TANK BATTLE

RUNS ON AN APPLE II

TREASURE HUNT

"Treasure" is the word on the lips of the good people of Marpletownship. Rumours abound that the Marple Caves abound with treasures — 20 of them — and all as close to priceless as only an adventure game can make them. Of course, there's a catch, for the rumours also cater for a dragon, a band of pirates without a scruple between them, elves, bats, magicians, invisible dogs and other even wilder beings.

On top of this, whisper the talkative townfolk, the caves themselves are in poor condition, there are deep pits into which many have fallen and died. And in some places the roof leaves a lot to be desired.

Can anyone be brave and foolish enough to wander unarmed into these caves in search of a sprinkling of rubies, pearls, gold coins, diamonds, emeralds, a silver bell, a gold watch, a golden harp, a magic wand and other riches? Yes! In fact, they'll be queuing up to roam around there and you won't be able to talk them out of these until they have grabbed all 20 treasures.

The first one to escape being eaten by a dragon, enchanted by a magician, or robbed by a pirate and who can find his way back to the cave entrance with all the treasures will find the good people of Marpletownship only too keen to offer him their goods (at a reasonable price, of course) and talk long and hard about many worthwhile investments. Lance Micklus has invented an enjoyable adventure (translated for the Apple by Murray Summers) which has a good line in throwaway humour. Key it in and try your hand at the best get-rich-quick campaign since daily paper bingo.

MAPLIN for ATARI

AUTHORISED DEALER

The World-beating ATARI PERSONAL COMPUTERS

3 consoles available

Atari 400 with 16K RAM (AF36P) £345

Atari 400 with 32K RAM (AF37S) £395

Atari 800 with 16K RAM (AF02C) £645
(expandable to 48K)

All consoles when connected to a standard UK colour (or black and white) TV set can generate the most amazing graphics you've ever seen.

Look at what you get:

- * Background colour, plotting colour, text colour and border colour settable to any one of 16 colours with 8 levels of illumination!
- * Video display has upper and lower case characters with true descenders, double and quad size text and inverse video
- * 57 Key keyboard (touch type on Atari 400) and four function keys.
- * Full screen editing and four way cursor control.
- * 29 keystroke graphics and plottable points up to 320 x 192 (160 x 96 only with 8K RAM)
- * 40 characters by 24 line display
- * Extended graphics control and high speed action using a DMA chip with its own character set
- * Player missile graphics
- * Four programmable sound generators can be played individually or together and each has 1785 possible sounds playable at any one of eight volume settings, for game sounds or music
- * Full software control of pitch, timbre and duration of notes in 4-octave range
- * Four joystick or paddle ports, sounds output to TV
- * BASIC cartridge and 10K ROM operating system and full documentation

MORE HARDWARE

Acorn Atom CHESS

THE PROGRAM YOU'VE BEEN WAITING FOR!

Fantastic machine code chess game for the 12K Atom. Features include: split screen (high res - alphanumeric) - many levels of play, casting and six passing computer plays black or white can set up pieces for chess problems. Supplied on cassette with instructions. PRICE ONLY £9.95. COTS 11 FORGET - COTS PRICES INCLUDE VAT & POSTAGE

INVADERS

"The best excuse to expand your Atom. It's a superb version of the standard game 'tough and fast' Your Computer No. 81 12K graphics mode 4. ONLY £9.95

VIC-20 SOFTWARE NOW AVAILABLE Send SAE for details

BUG-BYTE

Microcomputer Software
98-100 THE ALBANY, OLD HALL
STREET, LIVERPOOL L3 9EP

Sinclair ZX81 software

ZXAS

Full machine code assembler for the ZX81 and 8K ROM ZX80 (16K) complete with documentation ONLY £3.95

ZXDB

Machine code disassembler and debugging program — can be used with ZXAS. Many useful utilities. For 16K ZX81 and 8K ROM ZX80 ONLY £9.95.

PROGRAM PACK 4 for 16K ZX81

Two highly entertaining and addictive games for the expanded ZX81. Written in machine code with very fast moving graphics. ASTEROID BELT and SUBBROUND (2 versions)

BOTH PROGRAMS FOR ONLY £4.95

PROGRAM PACK 5 for the 16K ZX81 and 8K ROM ZX80

Two programs for the expanded ZX81 to keep you entertained for hours! 3-D CRO is written in machine code and is hard to beat. The other is a computer adventure game called MARS RESCUE.

BOTH PROGRAMS FOR ONLY £4.95

ADVENTURE

An adventure program entitled THE DAMSEL AND THE BEAST. A Game of concentration and suspense in which you, the intrepid hero, must wander in the darkness and dangers of the Beast's palace, find the Damsel hiding or imprisoned there, kill the Beast, and then last but not least, lead the Damsel to the palace exit before she starves to death. There is an "easy" (?) version for L-pate heroes, a medium game for the experienced adventurer, and a difficult game for the suicidal. An extremely complex, frustrating and entertaining game.

PRICE ONLY £6.50

747

FLIGHT SIMULATION PROGRAM FOR THE 12K ATOM

Written for Bug-byte by a 747 pilot. Accurate simulation of a 747's cockpit display (airspeed, altitude, rate of climb, attitude, flaps, etc., and graphic display of horizontal situation and attitude), allows you to guide your craft to the landing strip. On making your final approach the display changes to a high-resolution 3D representation of the runway coming up to meet you. A real test of skill. Finding the runway is quite a challenge — landing safely is even more difficult. If you succeed, you are awarded a skill rating and the chance to take off and try again.

REQUIRES FLOATING POINT ROM PRICE ONLY £8.00

Combine accurate flight characteristics with the best in animation graphics and you'll have SubLOGIC's

T80-FS1 Flight Simulator

for the TRS-80

SubLOGIC's T80-FS1 is the smooth, realistic simulator that gives you a real-time, 3-D, out-of-the-cockpit view of flight

Thanks to fast animation and accurate representation of flight, the non-pilot can now learn basic flight control, including take-offs and landings! And experienced pilots will recognize how thoroughly they can explore the aircraft's characteristics.

Once you've acquired flight proficiency you can engage in the exciting British Ace 3-D Aerial Battle Game included in the package. Destroy the enemy's fuel depot while avoiding enemy fighters.

Computer and aviation experts call the T80-FS1 a marvel of modern technology. You'll simply call it fantastic!

Special Features.

- 3 frame-per-second flicker free animation
- Maximum instant keyboard input
- Constant feedback cassette loader

Hardware Requirements.

- Radio Shack TRS-80, Level 1 or 2
- 16K memory
- Nothing else!

£17
Only

GREAT BALLOON RACED

The Great Balloon Race! The world's fastest graphic arcade type game which requires skill, coordination and determination to guide a wobbling balloon around the obstacle course. Invisio will enable you to get better, but how much practice will you need to win the Great Balloon Race? Every entrant will get 3 balloon tags to add to the highest score they achieved. The highest score recorded and verified using the game's special check system by October 1982 will release the prize. Versions for VIC & 40 Col PET

ONLY **£16** inc VAT & P&P

The prize kitty starts at £50. Watch how the score and money increase during the year! Will your name feature in this issue in 1982? YES!

2 PRIZE PROGRAMS FROM Mr. MICRO AVAILABLE DIRECT OR FROM CBM DEALERS

GOLD RUSH

The first computer graphic adventure game to have real gold! The Mr. Micro mine terminal will teach you a little of the background to the 1848 California Gold Rush and then transport you back in time to mine it. You must then use your powers of judgement, creative thought and strategy to give the tough life of the gold prospector. The program contains several separate games and adventures which you can enjoy playing when it's time again. Can you beat all the other prospectors who are searching for the gold? If you are clever enough to find the world first then you will win the Real Gold! Accept the challenge now, you will enjoy this unique adventure (but you might enjoy finding the Gold even more!)

DECEMBER 1981 GOLD VALUE HAS REACHED £150. RISING WITH EVERY PROGRAMME SOLD. No one has even got close yet to these NO DUB ADVENTURES OUTLINE!

ONLY **£16** inc VAT & P&P

FOR VIC 20

SPECIAL OFFER! 2 PROGRAMS FOR THE VIC 20 - FOR ONLY £6.00

RUNS ON A 40 COLUMN PET IN 8K

DRAGON DRUGGIN'

BY PAUL JAY

Never in the history of Necromancy had there been such a task. Defeating a fiery dragon with nothing more than a hoary old spell for turning snow into sleeping tablets.

When the fearsome and foul dragon, who we shall refer to henceforth as "Horace", came down from the mountains, the villagers feared the worse. Rightly as it turned out. For Horace immediately set to, devouring maidens, breathing fire, smoke and halitosis, putting up mortgage rates and generally behaving in the sort of way that would give football supporters a good name.

All this action occurs off-screen and I did not program any of it into the game . . . he thankful for small mercies!

Horace's anti-social behaviour is a problem which cannot be tolerated, so the local wizard was called for and apprised of the situation and the need for urgent action.

Wizards have often appeared in adventure-type games but none ever had to work under the same restrictions as our hero, Butch.

All through wizard school, Butch would misbehave, preferring to smoke behind the apothecary labs than learn his frog-turning tables.

So Butch left wizard school with only a C.S.E. pass in Magic Sleeping Pill from Snow transmuting — generally considered a soft subject.

Butch can only manage five pills anyway. They appear in the sky at the top of the screen and fall rapidly to the ground. You can direct them into Horace's mouth by pressing "space". Three is enough to put even a dragon to sleep.

If less than three pills enter Horace's mouth, he will respond by burning Butch's head off — a violent game, perhaps, but then life's like that sometimes.

David Attenborough captured some of the excitement of the story of Life in his recent T.V. series, now it is possible to capture the rest on an Acorn Atom.

Life is the popular computer cell generation game which was first invented by Cambridge mathematician John Horton Conway. A cell pattern is plotted on the computer screen and when the program is run, three simple rules which the cells have to adhere to, come into operation.

The rules of Life are Birth, Survival and finally Death.

Birth — if an optimum

LIFE

number of cells (3) surround an empty cell it will be brought to life on the next generation.

Survival — If a cell has either two or three neighbours it will remain alive in the next generation.

Death — if a cell has less than two living neighbours

then it will die of loneliness, more than three and it will die of overcrowding.

So after each generation the screen changes, with some cells giving birth to others, some merely living on and some dying out.

There is a limit to this computerised version of Life

though, to prevent it getting out of hand, all the action takes place within four borders. A cell is considered to be neighbours with another if the two share a common border or corner — so diagonal neighbours count as well.

Then the laws of Life are applied simultaneously with every square on the board being checked. This is a task ideally suited to a computer and the excitement comes from plotting in an original pattern to produce the most exciting action. It has all helped to turn Life into a computer game classic.

THE GAME OF CELLULAR EVOLVEMENT

A vertical strip of illustrations showing various marine life. From top to bottom: a five-pointed starfish, a sea slug, a jellyfish with a bell and tentacles, another five-pointed starfish, a snail with a spiral shell, a large shark, a fish, and a crab. The illustrations are simple line drawings.

[illegible]

**RUNS ON A
TRS-80**

BY ROBERT HALL

ENTRAPMENT

Entrapment is a deceptively simple strategy game which can be seen as a struggle for living space.

One of the best two-player games around, it requires fast reflexes, good control and the ability to think on the move and outwit your opponent.

Skill determines the outcome, yet it can be played and enjoyed by a four-year-old, the controls are that easy to master and the game's objectives so obvious.

The aim is to move a growing life-line into free space on the screen. That is space not taken-up by your own "tail", your opponent's "tail" or the boundaries of the screen.

As the screen gradually fills, so certain areas of it are cut off from one or both players. The winner is the player who can cut his opponent off with the least space to play with. And then just avoid mistakes until his opponent runs out of room and is forced to hit an existing line.

Take care not to reverse direction, as this is judged as running back into your own "tail".

The movement instructions are included in the table below

Movement	left player	right player
UP	W	P
RIGHT	S	.
DOWN	Z	.
LEFT	A	L

THREE SINCLAIR 1K WONDERS

Many games players find the limits imposed by 1K of memory as a frustration to be borne until they have saved up enough money to expand their computer.

Others accept the challenge to produce a worthwhile game within these restrictions and apply themselves via a little let-

eral thinking to come up with some of the most imaginative of computer games.

Here we present three such games, kindly donated by our inspired readers for Sinclair ZX81 owners to try out: *Android Attack*, *Mole* and *Catch-a-Bag-of-Swag*.

The first of our 1K wonders is *Android Attack* by Michael Kincaid and David Chapman.

The aim of the game is to shoot down as many advancing androids as possible before these escape your fire.

One point for each alien slain and once the score gets past 10 the going gets harder as the creatures start from closer in. The game is over when three androids have escaped.

To move your gun, the commands are U to move up, N to move down, F to fire. The variables used are

K = Your score
C = Number of androids that have passed you
D = Where android starts across the screen.
P = Line where your gun is
S = Line where android is pointed on
V = Movement of your gun
T = Count for moving android across screen

Ian McWilliams' *Mole* game is an original test of foresight and dexterity.

The program simulates a mole diving deep into his burrow. Unfortunately he is blind and has to be guided down using the "N" and "M" keys on the Sinclair keyboard.

Projections which have to be negotiated, stick out from either side of the tunnel and a point is scored for each move until the poor mole stumbles into a wall.

For such a simple game it is surprisingly addictive. List of variables.

A = FOR NEXT loops and position of passage

P = Position of mole
R = Character at mole's next position
S = Count of score

List of subroutines.
At line 20 = print out passage.
At line 24 = check for next position of mole. Print out mole. Increase score and create next position of mole.

Catch-a-Bag-of-Swag by Julian Downes invites you to catch the money as it falls in bags from the bank above.

You have control of a catching "bucket" which can move left or right, using the "S" and "B" keys.

The bags are of random value and you must catch as many as possible to make the "big" worthwhile. Once 15 bags have been dropped the game starts again. A check is kept of the highest score so make sure you catch the valuable ones. A rundown of the program follows:

10-30 — assign variables — H = High score X = catcher position S = Score.
40 — M counts the number of bags dropped.
50-60 — A determines (randomly) which bag falls. B determines (randomly) its value.
70 — displays bank.
80-140 — Makes bag fall & moves catcher.
150 — Has catcher caught bag?
170-190 — if "Yes" then adjust score.
200-210 — otherwise continue.
220-250 — Once 15 bags have been dropped, check for new high score and adjust if necessary. Then start again.

1K ZX81 ADULT GAMES

CAN OF WORMS

RED UP WITH THE SAME OLD 1K GAMES? WE ARE! FORGET THE KIDS STUFF. GET STUCK INTO OUR GROWN-UP GAMES. FOR JADES MINDS. ALL ORIGINAL. ANIMATED GRAPHICS. EXQUISITE. BAD TASTE. NOT FOR THE SQUEAMISH.

ALL THESE PROGRAMS ON CASSETTE INCLUDING POSTAGE. • BEYOND NEWLY DESERVING INSTRUCTIONS. SEND TO: DEPT CVG AUTOMATA LTD, 68A OSBORNE ROAD, FORTSMOUTH PO5 3JE. **£3.00** WE'LL MARKET YOUR PROGRAMS. SEE FOR DETAILS.

The Essential Software Company

THIS IS NOT A PRACTICE DRILL! EARTH IS BEING INVADED ON YOUR TRS80 & VIDEO GENIE

Galaxy Invasion

The newest and most exciting invadara type game yet! Cruel and crafty aliens attack Earth. You are the sole defender. As you fire your laser at the aliens they swoop down and bomb you. Exciting use of graphics! Must be seen.

TRS 80 Levels I & II 16K Tape

Video Genie 16K Tape

SuperNOVA

ORDER NOW

Now the amazing ASTEROIDS arcade game for your TRS 80! Your ship is floating in the middle of an asteroid belt! Your only escape is to destroy them and the crafty alien spacecraft! Blast them with your laser, thrust, rotate or hit hyperspace to survive!

TRS 80 Levels I & II 16K Tape

Video Genie 16K Tape

Cosmic Fighter

Your fighter appears below a convoy of Aliens! If you destroy them another set appears who seem to be slightly clever than before! Soon your space station nears but before you can dock the station comes under attack! Survival is up to you! The excitement is just beginning!!

TRS 80 Levels I & II 16K Tape

Video Genie 16K Tape

3D Adventures

for TRS 80 LEVEL II 16K

3-D means that as you wander through the mazes and buildings, full screen graphic display constantly shows your position in a perspective format as though you were actually there! This "rat's eye" view adds an entirely new dimension to adventure.

English language commands can be entered at any time to manipulate your environment. The command sets are extensive and sophisticated. Dozens of objects are scattered throughout the mazes and buildings. You can pick them up, burn them, throw them, etc. You may need the sword to fight off an ugly little man. Or a steel rod to hold apart crushing walls. Deathmaze 5000 and Labyrinth allow the traditional one and two word commands. Asylum incorporates our Advanced Language Interpreter (ALI), which allows full sentence input.

Deathmaze and Labyrinth consist of over 550 locations!

Asylum tops 1200 locations!

Attack Force

Dodge the alien Ramships and fire missiles to destroy them before they get you. The alien Flagship uses his deadly laser bolt to transform a Ramship into another Flagship or into your ship's double. Look out! Destroy your double and you could destroy yourself!

TRS 80 Levels I & II 16K Tape

Video Genie EG3003 16K Tape

Robot Attack

THE GAME THAT TALKS

TRS 80 Levels I & II 16 K Tape

Video Genie 16 K Tape

The Newest and Most Astounding Arcade Game that TALKS has just Reached Planet Earth. You can't help yourself. You have to stop them at all cost. Don't let up. Written especially for high quality graphics you'll simply be amazed and excited by the action.

gobble MAN

Watch out behind you! As you hurry through the maze collecting

your energy modules you score points. But don't let the Gobblemen catch you. If you are crafty sneak up behind them and neutralise them to gain extra points. Just keep a watch. When they attack you they come in fast. Just don't lose your nerve.

Adventure

EVERY adventure needs a few idiots (sorry, heroes) brave enough to test its terrors. So the computer must be able to decide the player's responses to given situations.

Following the arrays which we set up in the last issue, we will now make our adventure program recognise and act on the player's response. Let us assume that this will be in the form of a verb followed by a noun. We will assign R1\$ to this and say it is "TAKE KNIFE";

```
300 FOR I = 1 TO LEN(R1$): REM
set up scan of R1$
310 IF MID$(R1$,I,1) = " " THEN
340: REM find position of space
320 NEXT: REM space not found
330 PRINT "REPLY USING TWO
WORDS": STOP: REM temp.
error message
340 LET R2$ = LEFT$(R1$,I-1)
LET R3$ = RIGHT$(R1$,LEN(R1$)-I)
```

We now have R2\$ = TAKE and R3\$ = KNIFE, and must check to see if they are valid words — and if so, find their numerical identities.

All that we need do is to uniquely identify each word and can achieve this by using (say) the first three letters of each word, to establish strings like: LET W1\$ = "DROTAKKILTR...": REM drop take kill turn LET W2\$ = "KNIFISCOWAXE...": REM knife tish cow axe we can identify our words so: 350 LET R4\$ = LEFT\$(R2\$,3): LET R5\$ = LEFT\$(R3\$,3) 360 LET C\$ = W1\$: LET CC\$ = R4\$: GOSUB 2000

Line 350 standardises the variable names for entry into: 2000 FOR I = 1 TO LEN(C\$) 2010 IF MID\$(C\$,I,3) = CC\$ THEN RETURN: REM found it 2020 NEXT: REM not found — try again 2030 LET I = 0: RETURN: REM not there — set I to zero

On return from this subroutine if I = 0 the word is not valid and we can continue: 370 IF I = 0 THEN PRINT "I CAN'T": R2\$ = "SOMETHING": STOP

Will you dare the deathmaze?

Deathmaze 5000 is a remarkable adventure. It is brilliant! It is maddening! That could be why its sequel is called "Asylum".

Author Frank Corr, was an 18-year-old Freshman at the Massachusetts Institute of Technology, when he wrote Deathmaze, after writing an English Research Paper on machine language.

Deathmaze is displayed graphically as a maze in perspective. Only forward movement is possible, by depressing the "up" arrow key. Movement in other directions is achieved by turning on the spot, using the remaining arrow keys, and thence moving forward.

A "save-game" feature is provided, which is just as well since the maze is reputed to have 500 cells spread over five levels. I can't verify this as I haven't managed to visit them all yet! To the side of the graphics is an updated inventory of objects and torches carried.

As you move you will occasionally come across a box lying on the floor. When over it you may open it and

take the contents by typing the appropriate instruction.

There is no prompt — but, as it by magic, your words appear at the top of the screen. On hitting enter, the response replaces the instruction.

So what goodies are in the boxes? Would you believe a precision crafted tribee? A mutilated anker? Hazards include execution by invisible guillotine and starvation if you have no food when your stomach starts grumbling (eating the snake only gives you heartburn!) — end — "That Room"!!

"That Room" has a way in — but please, please someone out there — is there a way out? What is the significance of the difference between 317 and 317.2? I have taken to listening to the BYRDS (turn turn turn) and resorted to Bible reading (Ecclesiastes Chapter 3 Verses 1 to . . .). I have tried roversing and turning. 317 = LIE??? Intrigued? Buy it and join me later in the Asylum!

● Deathmaze is available in 16K for the TRS-80 and Video Genie from the Essential Software Company but the 32K Apple version, only, from Mod. Systems Software in the US.

However, in this case I = 4 and TAKE has been identified. We can now re-assign C\$ = W2\$ and CC\$ = R5\$ and go on to find the noun in the same way. First though, we must remember the value of I before it is changed on re-entering the subroutine. 380 LET K1 = I: REM now go on to find noun

As the program builds up, inevitably the strings holding valid words will lengthen, increasing the scan time of the

FOR-NEXT loop. Can we speed things up? Yes — the trick is to amend line 2000 thus:

```
2000 FOR I = 1 TO LEN(CC$)
STEP LEN(C$)
```

Since the words are now in three-letter blocks we can step by the length of the block and reduce the time by 2/3.

The second trick is really an illusion! Place the most frequently used words at the beginning of the string and the rarer ones towards the end.

MIND ROUTINES

A storeroom which is 13ft square has in it three pyramids, all of different sizes, built from foot-balls each 1 foot 6 inches in diameter.

The pyramids have triangular bases (e.g. one on top, three on the next layer, six on the next and so on). It is noted that the number of layers in both the smallest and largest pyramids together is twice the number of layers in the other pyramid.

Using all of these balls it is possible to construct three pyramids with square bases, so that each pyramid has a different number of layers and is also different from the number of

layers in each of the triangular pyramids.

(Square based pyramids have one ball on top, four on the second layer, nine on the next and so on.)

Can you tell me the number of layers of balls in each of the triangular and the square pyramids?

WIN OUR CHAMPAGNE

Two bottles of champagne are up for grabs on this page every month. The first correct answers out of the hat for both the Mind Routines problem and the crossword on 15 January will have bottles of champagne rushed to them. Ian Pedder's Mind Routines problem will test both your ability to think through

a puzzle and set it out as a program. These lend themselves to solving by program. If you are more literary minded try Nevera's Crossword and see how you get on.

NOVEMBER WINNERS

Our November Mind Routines puzzle proved very hard. Alan Green of Reading Road, Winkersby, Wokingham was one of the very few who managed to get it right. Mr B Green of Anchorage Lane, Sprotborough, Doncaster was first out of the hat with a correct Nevera Crossword solution.

See page 11 for the solutions to the December issue's Nevera Crossword and Mind Routines.

NEVERA CROSSWORD

ACROSS

- Health giving computer diet such as 19 might bring his mentor (2, 5, 3, 1)
- "Perfect" as the Blackjack program might say at the start (5)
- Came to the point about E.D.P. rate (7)
- Micros made of tiny nuts (5, 5)
- Unpretentious integer (7, 6)
- Thoroughly proficient but now obsolete chess computer (10)
- Printer drive on the farmyard (7)
- One of the wise men plotted on the screen (5)
- Mr Chip's favourite computer (8, 3)

DOWN

- Sounds like the mistake in ET $x = 1$ at this time of year (4)
- Like VIC's screen and Joseph's coat (13)
- Install a terminal part in the future (5)
- R2D2 characters! (13)
- E.A. or I.B.M. programmed to produce a Galaxian missile (3, 4)

- Micro in the lost and found columns? (7, 3)
- Undressed and reduced in dimension (10)
- Having the will to test a Texas program segment (7)
- Obey the tennis game

- instructions to start with (5)
- Program control structure bag (4)

● For details of Computer & Video Games competition rules see page 11.

Kit Korner

GRIPE OF THE MONTH

GRIPE of the month goes to all those makers who do not supply transistor pads with their kits. This would do away with all those blown transistors I have come across — especially in the ZX81 — owing to excess heat when soldering.

Although I have been critical of the ZX81 in the past I do have some good news for those of you with problems. It appears that Sinclair are prepared to repair, free of charge, machines which have been opened or even tampered with, so long as this was not the reason for the fault.

They also have a very good spare parts department which I have already made use of. I made the mistake of packing the ZX81 with the power supply, which indented and ruined the keyboard. Oh well, you live and learn.

Now for a little kit building advice. Although, in some kits, the components come preformed ready for insertion you should always have a pair of pointed-nose pliers handy, if only to stop finger burns. Where there is a need to bend up components it should be done with the pliers between the component and the bend.

If you are not quite accurate at first and the component does not fit correctly, do not force it in. Try again by first squashing the bend flat. Do not attempt this too many times as the lead will eventually weaken and break. A drop of solder on the bend, once the component is in place will do as a bodge if this happens.

Remember that the lead is only held onto the component by the moulding. Any undue force may break this contact which would leave you with an invisible open circuit.

A helpful tip when "building up" the components in layers on the board is to use a piece of sticky tape to hold them in. The other way is to use a piece of

foam to turn the board over onto. This allows for components of different depths to be soldered in at the same time.

When it comes to chip holders I am bound to complain, not only about the kit builders but also to the suppliers. So many times have I seen holders raised off the board, if not at both ends, then at least one. This leads to increased stress and strain on the pins and, with the great number of times kit builders' heavy hands get to them, eventual fracture.

Besides this, it is often the case that holders are supplied which are not, in my view, suitable for the usual punishment.

Generally these are of the open, Molex type which are quite suitable for flow-solder, production-line assembly but not for kits. I prefer to see the totally encapsulated versions which seem to stand up better to the rigours of kit building.

OPEN UP A TANGERINE

One kit that uses this type of open socket extensively is the Tangerine Microton 65. The board, however, is so well laid out that each one should go in with no trouble at all. Be sure to

solder in all the components before the holders as they are all very close together and can be very fiddly.

Tangerine have made the commendable decision to supply most of their exposable system in cost-saving kit versions as well as pre-assembled. If the other boards are of the same high standard as the Microton 65 there should be no problems. Make sure, though, that you have made all the links on this board as directed. I forgot and it took me a while to figure out why I could not get it going.

Tangerine have a very good service department which accepts problems over the telephone and is very helpful. There is also a Tangerine User Group which aims to help the beginner, as well as the advanced owner, with his or her new machine.

If a company is prepared to offer its products in kit form then it should also be prepared to answer problems from the public. Most do, but it may pay in the long run to find out the ones who do not and keep away from them. On the other hand, there may — as in the case of Tangerine — be a user group to which you can turn, if in difficulty.

Sinclair ZX81 Personal Computer the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day.

Lower price: higher capability

With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

Every ZX81 comes with a comprehensive 'step-by-step' written manual – a complete course in BASIC programming from first principles to complex programs.

Kit: £49.⁹⁵

Higher specification, lower price – how's it done?

Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

New, improved specification

● Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.

● Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.

● Unique syntax-check and report codes identify programming errors immediately.

● Full range of mathematical and scientific functions accurate to eight decimal places.

● Graph-drawing and animated-display facilities.

● Multi-dimensional string and numerical arrays.

● Up to 26 FOR/NEXT loops.

● Randomise function – useful for games as well as serious applications.

● Cassette LOAD and SAVE with named programs.

● 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.

● Able to drive the new Sinclair printer.

● Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips.

Built: £69.⁹⁵

Kit or built – it's up to you!

You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 600 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder.

puter-

16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sinclair ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port at the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personal database. Yet it costs as little as half the price of competitive additional memory.

With the RAM pack, you can also run some of the more sophisticated ZX Software – the Business & Household management systems for example.

Available now- the ZX Printer for only £49.⁹⁵

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alpha-numerics and highly sophisticated graphics.

A special feature is COPY, which prints out exactly what is on the whole TV screen without the need for further instructions.

How to order your ZX81

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day.
BY FREEPOST – use the no-stamp-needed coupon below. You can pay

at last you can have a hard copy of your program listings – particularly useful when writing or editing programs.

And of course you can print out your results for permanent records or sending to a friend.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your computer – using a stackable connector so you can plug in a RAM pack as well. A roll of paper (65 ft long x 4 in wide) is supplied, along with full instructions.

by cheque, postal order, Access, Barclaycard or Trustcard
EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

KORCHNOI GIVES HIS CHESS VOTE

The world's No. 2 chess master, Viktor Korchnoi has put his name to an electronic chess game which is on show for the first time at the Earls Court Toy Trade Fair.

The player who reached the final of the World Chess Tournament on the last two occasions has endorsed one of the newest chess games around. The game, the Wastrik CC3, is a sophisticated electronic chess game which has several improvements on the first version of this series.

There are now 25 standard random opening moves, you can alter your strategy of play or rectify mistakes by making use of a special facility, which allows you to have up to three full moves backwards and three full moves forward.

The response time of the machine's moves have been cut. Giving a response, on skill level one, straight away, on level two, in 16 seconds, and up to 28 minutes on the top level.

During the game the LED's light up to reveal the computer's thinking on its next move. You have an advantage over the computer because you can step in and stop the game at any time by using the halt key.

One of the nicest things about the Wastrik CC3 is its price. It will cost between the £150 and £160 mark — very competitive.

AN ALIEN IN THE HAND . . .

The heavens are filled with fast-flying alien creatures and enemy saucers raining relentlessly down on your home base in the Galaxy 10,000 hand-held electronic game.

Your task is to leap to the defence of your people. Specially selected for the job it is up to you to shoot down the race against you. With a swift deftness of hand you must move the firing base across the L.C.D. screen to avoid the laser shots from the attacking force.

Out in the shops in the next couple of months Galaxy 10,000 carries a price tag of £28.95 U.K. distributors Computer Games claims that this new toy will give hours of compelling entertainment, justifying the price.

CHRISTMAS 1982

TOY TRENDS

The British toy industry is quickly off the mark after Christmas, planning its new year at the toy and hobby fairs of January.

These shows are aimed at the trade and give manufacturers a chance to enlist distributors and retailers' support for the toys and games which children will be clamouring for next Christmas.

The computerised and electronic toys field is a competitive one and cloaked in secrecy but COMPUTER & VIDEO GAMES is unwrapping a few of the toys early to show you what's in store.

The hand-held games will continue to be popular: in 1982, mirroring the best arcade games and a lot of emphasis is being placed on small electronic games which can be used to keep children amused while travelling. Following the cinema trend, the games industry is indulging in fantasy themes and these will start to take over from the present rash of space games.

Chess and sophisticated logic games will be aimed at the adult gamblers and the computerised chess field promises to become especially competitive.

Some of the toys mentioned below will be available in stores from January but in many cases, stocks will not reach the shops until the middle of the year at least.

Our preview of the toy fair will give you an idea of how the toy and games industry is approaching the coming year and what to look out for when the time comes to fill the Christmas 1982 stockings.

ESCAPE THE RAVENOUS GHOULS

Keep those ghouls at bay when they chase you through a difficult maze eager to devour you at the first chance.

Start off down the tunnels of a complex maze eating up the dots covering the path as you go. Pac-Man 2 is a new hand-held toy on show for the first time at Earls Court British Toy and Hobby Fair. Billed as a "third generation" electronic toy it is one of the first hand-held versions of the popular arcade game Pac-Man.

Pac-Man 2 is a rectangular in shape with an oblong L.C.D. screen on the uppermost face of the toy. It's for either one or two players, the controls for each being at the two ends of the screen.

The player controls the aster — usually referred to as the pacman or munchman — by using the four directional keys so that you can move him up, down or to the left and right.

You have to keep concentrating to spot the whereabouts of the ghosts and make sure you don't get your pacman locked in a dead-end section of the maze, or surrounded inescapably by his pursuers.

In the four corners of the screen are four energy posts which enable the pacman to eat his pursuers and score bonus points.

An added feature of Pac-Man 2 which sticks as truly as possible to the arcade version, are the two tunnels on each side of the maze.

Pac-Man 2 is made by Entex but distributed by Leisure electronics based A.A. Hales. It will be in the shops later in the year selling for about £30 but could be as much as £35 depending on the shop manager's discretion.

CHALLENGE TO AN EASTERN TUSSLE

A hardened electronic eastern gentleman will challenge you to a tussle in one of the most original new games planned for 1982.

The game cashes in on the current martial arts boom which is filling gymnasiums up and down the country with ginning white-robed practitioners of the new self defence disciplines.

Called Blackbelt, it consists of a three dimensional action man in his judo gear, mounted on a plastic base. He challenges the player to fight him by making the appropriate limb whip into action.

On each of the Blackbelt's lightning limbs is an LED light. When one of those flashes on it means that part of the body is about to strike a blow. By pressing the right button you must hit back with the correct leg, arm or foot. You'll also hear the devilish laugh of Blackbelt when the lights go on, warning you of his intentions.

There are three skill levels for you to progress to when you become an expert in this form of martial art. The faster you retaliate with Blackbelt's flashing arms and legs, the harder the game gets — as the lights on the limbs speed up.

The in-built electronic scoreboard notes the player's score after each game. Each

game lasts one minute, but the quicker you can move the man's limbs, the more blows will be packed into that time. If you are not sure of your score after playing a game and the light has gone out, wiggle one of the parts of the body and the score will flash up again. Top score is 200 points.

Blackbelt is just one of the new range of electronic toys brought out for 1982 by Oxfordshire based Action Games and Toys. Its retail price is listed at £10 making it very affordable.

PASS THE TIME WITH AN OCTOPUS

A small but compulsive set of games is bound to capture attention, not only at this year's toy fair but for the months to come.

These compulsive items come in the Game and Watch series — a range of pocketwatches which double up as electronic games. The new ones include titles like Chef, Octopus, Popeye, Mickey Mouse, and Parachute.

In Chef, for instance, the idea of the game is to catch flying missiles in the shape of food or kitchen utensils which seem to be affected by dangerous poltergeists. You operate the chef using a control button at the side of the unit and make him run across the screen catching objects which are whizzing through the air.

If you find you can notch up a high score on the first level of play, progress to the higher level. All the games have two skill levels and store the highest score in the memory cells.

In Octopus, the scene is set on the sandy bottom of an ocean. The player operates a diver who is attached to a small boat floating on the water's surface. It is his job to recover pieces of treasure which are sunk tentaculously in the sand a good walk away. But beware the Octopuses.

Being more sophisticated than the original versions of Game and Watch these new ones are more expensive at £22.95.

PICK OF THE PUCKMEN?

Following up the Puckman craze in the sixties last year are a handful of hand held versions.

You will be able to carry your machine around with you to perfect your technique at any time. Adem Imports' Munchman, is a typical example. The object is to score as many points as you can by manoeuvring a man around the paths of a maze. As long as he keeps eating the dots of the maze the man's energy is kept charged. The chip controlled monsters on the man's trail can digest him, if he is caught.

Munchman features multi-coloured LCD displays showing the monsters, the man, the dots and the labyrinth of the maze. The points system works on the number of dots chewed up and bonus points for any monsters that you manage to gobble up.

One of several hand-held versions of Puckman to be stocked on shop shelves this year, Munchman will retail for £25.95.

Computer Games has also brought out a version of this game. Called Puck Monster, it is more or less the same game with a different title. The major difference between the toys is in price. Computer Games' toy will sell for £28.95.

The third is by A. A. Hales and is dealt with above. Three versions of Puckman are now out because the manufacturers anticipate demand for such a hand-held toy will be very large, but which is the best of the bunch can only be judged in the fullness of time.

MORE GAMES TO WATCH OUT FOR

Watch the hours while away on your wrist and play an electronic game at the same time.

A new type of watch will be in the shops this year with a practical and entertaining concept involving a simple but compulsive game. These watches look like ordinary digital ones but the figures are displayed on the LCD screen at the very top taking up

about one quarter of the whole face.

The rest of the face is filled with a variety of LCD symbols which make up one of four different games, Fling Squad, Alien Assault, Missile Strike and Blast Away.

On the face of the watch are two buttons which the player uses to control the games. All

the games have a "war" theme and involve darting from one side of the screen to the other, avoiding well-aimed bullets, firing rockets to wipe out the enemy creatures, blasting missiles from enemy craft and engaging in battle with tank squadrons.

An LCD indicator on the front of the watch face keeps track of the score. Press a button and you can hear the watch beep when you bombed the enemy with your missiles. The watch's power supply comes from tiny batteries used in ordinary digital watches and these are included in the price.

The housing for the watch face is made of black plastic which should withstand the odd heavy knock. GameTime watches are made in the US and are being distributed through Woodford-based Computer Games. The expected price for them is set at £29.95.

PROGRAMMING

By TED BALL

GET TO KNOW YOUR BUGS

There is a limit to how much anyone can enjoy tracking down the programming errors that inhabit newly keyed-in creations.

It is possible to write programs that run correctly the first time, but except for the shortest and simplest programs there are nearly always some errors. Locating and correcting errors can be a time consuming process and is best approached systematically.

Copying and typing errors are easy to make, and much time and trouble can be saved by carefully checking the program listing on the screen (or hard copy if you have a printer) against the source from which it was copied. Many copying errors will produce an error message when the program is run, but this is not an infallible means of finding all such errors.

A large and complex program may include sections which are rarely executed and typing mistakes in these sections may not show up until the program has been in use for some time.

There are some common errors in copying that quite often do not lead to the system producing an error message but cause the program to give the wrong answers. These errors include the omission of a line, or a statement in a multi-statement line, and mistakes in copying variable names. Confusion between the numerals 0, 1, 2 and the letters O, I, Z is particularly common, and sometimes occurs in books and magazines when a program has been typeset instead of reproduced photographically from a printout. A simple example is `LET X = B1 + A1` instead of `LET X = B1 + A1`. Basic will find nothing wrong with this, but the program will not give the right answer.

BUGS WITH WRONG ANSWERS

Another type of error which produces the wrong answers without giving an error message is due to misunderstanding the way your system evaluates complex expressions. For example, how are:

`LET X = A/B*C`

`LET Y = A/B/C`

`LET Z = A*B**C`

evaluated? If you are not sure how the computer will treat an expression you can write a short program to test it. However, it is safer to insert brackets, although they may be unnecessary, or to break up the expression into a series of simpler expressions, to ensure that it is evaluated in the way you intended. This is particularly advisable if the program is to be used by other people or transferred to a different machine.

EXECUTING BUGS

Errors which cause program execution to stop, include function arguments and array indices out of bounds (e.g. attempting to divide by zero, or access the 101st element of an array which has been dimensioned to 100).

Execution errors may be due to mistakes of the kind discussed above, but more often they are caused by errors in the program logic, particularly where the programmer has neglected to allow for special cases.

The cause of this type of error

may not be immediately obvious; the error message will give the line number where program execution stopped but the ultimate cause of the error may be in a completely different part of the program.

If you have execution errors or wrong answers it is best to review the whole program, paying particular attention to the initialisation of variables and the destination of GOTO statements. Most versions of Basic initialise variables and array elements to zero, and it is possible for a section of a program to work correctly the first time around but give the wrong answer later on. For example:

```
1000 FOR I = 1 TO N
1010 LET S = S + A(I)
1020 NEXT I
1030 RETURN
```

If the program has not previously used the variable S this subroutine will return with S equal to the sum of A(1) to A(N) but afterwards it will start with the value left in S and add on to this.

You should also look for the converse of this type of error, where initialisation is performed correctly at the beginning but is repeated at a later stage when it is not required.

You also need to be careful with the condition in `IF... THEN...` statements. It is usually straightforward to decide whether to have: `IF A < B` rather than `IF A <= B`, but in more complicated cases, where A and B are expressions, or where there is a sequence of `IF... THEN...` statements it can be difficult to get it right. Any complicated tests should be worked out carefully when designing the program and if the resulting code does not work properly it is usually quicker to start again.

A BUG IN YOUR ARITHMETIC

The accuracy of the arithmetic performed by Basic is a frequent source of bugs and it is difficult to find why a program is going wrong unless you know the reason for the inaccuracy. Although numbers are entered in

decimal, Basic converts them to binary for internal storage and calculation and converts back from binary to decimal to print out the answers. Very few decimal fractions can be converted exactly to a binary fraction and two binary fractions which, in the computer's internal representation, differ by a very small amount, may print out as exactly the same decimal number.

If your program is going wrong on the statement `IF A = 0 THEN ...` you may find that when you insert the statement `PRINT "A=";` immediately before this test that the machine gives `A = 0`. However, if you ask the machine to print `A*(10**10)` you will probably get a non-zero answer.

These errors in conversion between binary and decimal can produce some very odd results. For example, on the ZX81 the command `PRINT .25` gives the answer 0, while `PRINT 1/4` gives 1.1641532E-10. The ZX81 calculates by division and gets the answer exactly right, but when converting .25 into binary the result comes out $1/2^{23}$ short of the exact answer, and by some peculiarity in the subtraction routine, does not give consistent results.

There is usually no problem with integer calculations, but with decimal calculations you cannot rely on the computer producing exactly the same answer you would get by doing it with

pencil and paper. You should allow for small errors by testing for two numbers being sufficiently close, rather than testing for equality. For example, instead of `IF A=B THEN ...` you should put something like `IF ABS(A-B) < 1B5 THEN ...`

Decimal/hinary conversion errors can also cause problems in `FOR...NEXT` loops with a fractional step. The two following programs demonstrate what can happen:

```
10 LET X = 0
20 FOR I = 0 TO 10 STEP 0.01
30 PRINT I, X
40 LET X = X + 1
50 NEXT I

10 LET X = 0
20 FOR I = 0 TO 100 STEP 0.1
30 PRINT I, X
40 LET X = X + 1
50 NEXT I
```

I tested these on two different machines and found that in the first case the last values printed were 9.99013, 999, and 9.9900002, 999, while in the second case the last values

printed were
99.9991,
1000 and
99.99996, 1000.
The reason
the loop
body is

performed a different number of times in the two cases lies in the way Basic executes the `NEXT` statement. When `NEXT I` is encountered Basic adds this step to `I` to get the new value of `I` and compares this to the upper limit. If the new value of `I` is less than or equal to the upper limit the loop body is performed again; Basic will not exit the loop until the new value of `I` is greater than the upper limit.

When conversion or rounding errors make the value of `I` a little greater than it should be, Basic may exit the loop prematurely.

A useful method for tracing bugs is to insert extra `PRINT` statements into the program, to give the values of variables at points where you suspect the program is going wrong. In many cases this will show immediately why the program is going wrong.

Where the bug is particularly obscure you may have to use this method to trace the operation of the entire program. There are debugging packages available for some microcomputers, for example the Pet Toolkit, which can be very useful for debugging large programs. The routines available include `TRACE`, which displays the line number currently being executed, and `DUMP`, which prints out the values of selected variables every time they are used.

FLUSH THEM OUT OF THE SYSTEM

System bugs often receive little publicity. There is an arithmetic bug in the ZX81 which results in `SQR(.25)` being printed as 1.3591409 (although `SQR(1/4)` comes out correctly). I have seen this mentioned in only three magazines, one of them being a specialist ZX80/81 publication. If you have a ZX81 with this bug you can obtain a corrected ROM by writing to Sinclair Research.

Another recently discovered bug occurs in many versions of Microsoft Basic, resulting in the incorrect handling of string assignments of the form `LET AS = AS + BS + CS` when there is very little free memory available.

MADE IN ENGLAND BY
VOLTMACE LTD
PARK DRIVE, BALDOCK, HERTS

IN THE sleazy streets of Lost Vagueness the traveller is subjected to the worst in vice and filth in the form of sex, drugs and rock 'n' roll.

The nearest thing to wizardry in this adventure game is a magic mushroom which sends your vision haywire and turns your brain into a psychedelic haze of pretty colours.

Softporn Adventure is delightfully seamy in theme throughout but humorously entertaining too. The purpose of the game is to find and seduce three women.

It was like a dream. I woke to find myself in the year 2000 A.D. in a wicked world in which the skies had turned green from plutonium pollution. I opted to go on holiday in a notorious gambling town where the only things people are interested in are drink, women and money. This is only a game though and you don't get "hands-on" experience yourself. You operate a puppet which becomes your eyes and ears.

With \$1,000 in my pocket I set off on my quest for debauchery, but \$1,000 is not a lot when you want to fling it round on drinks, gambling and sex. In a dimly lit, ill-furnished bar, I came across my first barrier to "sex-cess". A closed curtain was in the way and only after guessing the password could I walk through the curtain to discover what fruits lay behind.

Tamely I tried classic words like "abracadabra". When that got me nowhere I ventured on to more imaginative words like "sex", "booze", "women", "perversion" (I won't ruin it by telling you what the password actually was). After exhausting a list as long as my arm, frustration had set in and I needed to feel a shot of whisky coursing through my veins. But \$100 a go... oh it's a sign of the times.

I took a break to gather my thoughts, and then started investigating the area. So far the only human I had crossed paths with was the degenerate barman, never mind a lady of easy virtue.

The whisky had gone straight to my bladder so I took a trip to the bathroom. Filth lay there too. The toilet hadn't been flushed for months. The computer was it... — it stank. On the walls were scrawled feet of seedy graffiti,

like: "Computer freaks peek before they poke".

The key to the game is the amount of money you have on you. It's vital for bribing people (like the pimp in the bar's backroom who wants \$2,000 before you can go upstairs to investigate further), entry to the disco (a perfect place to pick up a girl), buying drinks and betting in the casino.

If you run out of money, the chances are that you will come unstuck and be unable to proceed. The way to build up your cash supply is to try your hand in the casino.

You can either play on the slot machines or at blackjack but the bets are fixed at \$100 a throw so it's too easy to whittle away your cash. Very easy for me anyway.

That's where I made my first mistake. I lost all my \$1,000 on blackjack but being an optimist I carried on playing.

Luck was on my side, or so I thought at first, and I found a passcard which got me into the disco. Girls galore were milling around daubed in "Californian sun tans" and little else. Gambling is thirsty work so I focused on the bar — this is an expensive joint, \$100 for a bottle of wine. At last I'd found a girl, and after a quick boogie with a blonde on the dance floor I moved in and kissed her. The computer beeped loudly and up on the screen flashed "Oh, don't do that, it gets me excited."

She rebuffed my amorous advances but not to be deterred, I stumbled back into the casino and into the hotel lobby where a voluptuous blonde sat invitingly behind the desk. No luck with her either, she was too busy working despite the place being devoid of people.

I blundered into a garden where I found a tasty looking mushroom, so feeling a bit peckish I ate it. I've heard that mushrooms have magic powers but this one

beamed me into another place — still penniless.

There are three alternatives if you run out of money. Go to Hell and the game ends. Be teleported back to life unharmed. Stay and try again in the game, though without any money it is pointless.

The aims and format of the game are reminiscent of most adventures but the frustrations perhaps a little more intense. There is no graphical picture on the screen, just written descriptions of what confronts the player. There is a nice line in cheeky replies to unlikely, or sometimes, downright unsober requests.

On kissing a girl I issued a series of frantic bleeps and stars filled the screen — if a seduction had taken place it would probably have exploded! But obviously my sex counted against me and I found no women willing to respond to my charms.

I was disappointed not to successfully seduce any women, mainly because I was intrigued (and still am) to find out just how the computer would react. If any of you know the truth I am waiting eagerly to hear it.

UK suppliers of Softporn are SBD Software in Richmond. It runs on a 48K Apple and costs £17.95 — far cheaper than a real night in "Sin City".

ELSPETH JONER

TV GAMES CENTRES CENTRES CENTRES VIDEO SCREEN

WIGGLING GOOD FUN

SNAFU

If you have a phobia about things which wiggle and grow, you'll want to stay well away from the screen when Snafu the snake game is being played.

The two snakes in the latest cartridge for the Intellivision home games centre, are not poisonous, they're the constricting variety. Their aim is to choke the life out of one another by cutting down the living space in their two dimensional world.

Take control of one snake and try to outwit your opponent as both creatures grow to gradually fill and cut-off areas of the screen.

It requires quick wits and some close control to succeed in out-manoeuvring the opponent's snake forcing him to double back on himself, or maybe crash into the walls of the 'pit', or his own body remains.

For sheer fast strategy it is a difficult game to beat. Keep one eye on your opponent's snake to see if he intends to cut you off from the bulk of the pit but make sure that your attention does not wander to the extent that you end up crushing yourself!

The game is marvellous pool that on computers simple ideas often work best.

Already a popular cartridge on other games centres, the Intellivision version costs £18.95 and is available from north London-based distributors, ACE.

MIND-BENDING TEST OF LOGIC

TREASURE HUNT

Treasure Hunt is a mind-bending game to test your memory and logic and stretch both to the limit.

For the Database TV games centre, the first version of the memory game comprises a matrix of blank squares displayed on the screen. This game is called "Flag Catcher" and you have to interrogate your own squares to discover where a flag has been hoisted.

The second game on the car-

THE ONE THAT WILL ALWAYS GET AWAY

FISHING

Jaws has nothing on the monster that lurks just below the surface of the Activision Fishing pond.

But he is not a man-eater — his voracious appetite extends only so far as thwarting the two keen anglers from reaping too swift a harvest from the pond.

The two competing fishermen face each other over a deep stretch of blue water, which is alive with plump fish patrolling various depths.

Each angler has half the pond to call his own and into this he casts his line, up to halfway across but as deep as he likes.

The aim is to dangle the end of the line at the same depth as the eye-sockets of the fish and if the centenary creatures swims past, then the hook will bite.

The fish swim frantically back and forth in a fruitless effort to escape the line, but their thrashings do attract Jaws. The shark

bridge has you matching up pairs of coloured squares which appear on the screen, by trial, error and memory. Treasure Hunt will keep you deep in thought and can be obtained from Database suppliers for £14, or direct from Hartfordshire based manufacturer Voltmece.

Lovers of the game of Othello will be pleased to find a version for Database. This new cartridge has just been added to the range, available for this machine and is known as Box Clever.

But only the name has been changed to protect the mercenary and this version remains true to the popular board game.

The object of this tactical counter struggle is turn most of the board into your own colour by capturing your opponent's counters between two of your own.

A computer is suited to the game as it will not miss any captures during the turning sequence and can play a very reasonable standard of Othello. The idea is to provide an electronic opponent when no human one exists, but it is possible to play against your friends on the television. The price is £14.

SURVIVAL IN SPACE

SATELLITE ATTACK

A lone spaceship in the outer depths of the galaxy is making a brave bid for survival in a heavy meteorite storm.

You control the spacecraft as on its journey through space, firing lasers at the asteroids to split them up into, just as harmless but rather smaller, rocks. And ultimately these can be obliterated.

If the game sounds familiar, it is because it's based on that popular arcade game Asteroids and already features in some form or another on most of the TV games centre systems: this is Philips' version, Satellite Attack.

One change from the normal game is that this version features two types of meteorite.

An ordinary asteroid is worth one point for a direct hit. To get three points you must fire and destroy a magnetic asteroid. These can be identified by their constant high-speed spinning as they whirl across the screen.

You can boost your score by hitting alien spaceships which dart between the meteorites and these are worth 10 points apiece. But beware, the alien ships are piloted by beings equipped with super laser guns which are computer controlled to home in your own spacecraft.

Among the other features is a protective forcefield which comes in handy when an asteroid slips through your fire, as ships set to collide with your ship.

This new cartridge for the Philips G7000 games centre costs £15.

A skier wearing a red jacket, black pants, and a red helmet is captured in a dynamic pose, leaning forward while skiing down a snowy slope. The skier is holding ski poles and has just kicked up a spray of snow. The background is a clear blue sky.

EX-116

The game sportsman wraps himself around just about every tree on the course, he stumbles at the patches of unfireable gray ice and crashes into the sialon poles, carefully spread out down its length.

And since among the courses gradually become easier, the turns tighter, the times faster.

The Olympic sport lends itself well to electronic graphics and with five downhill (trails only) and five slalom (gates to pass through) courses of varying difficulty it keeps the interest up.

Speed and timing are the essence of the game. Speed is attained by facing downhill as the game mimics the sport by slowing down a skier who tackles the slope side on.

With the Atan difficulty switch down the grey patches of ice which cover the slopes, become treacherous, but you can jump them at the push of the fire button.

The feel of a recent batch of six cartridges from Activision looks new with the Atari TV, games centre. Skiing costs £16.75

It is the games that a TV centre offers which will eventually make or break it in the high street.

Certain makes of TV games centre have become associated with their best-selling software and this is the mark of their success.

In video screens we will be

looking at the "best sellers". Those cartridges which are always at the forefront of advertising campaigns and whose features set the standard which the rest of the machine's software must try to match.

To start this series off, we look at **Martel** intelligence's top-selling cartridge, **Sector**.

BEST-SELLERS

The incredibly lifelike stars of the Intellivision Soccer game are the best advert Mittal and its British distributors, ACE, have in this football crazy country.

As a generation of youngsters once created their own World Cup thrills with Snbdueto tournaments in 1966, so a new generation will bring their own electronic Keogens and Brookings on to the fields of Spain in 1982. It all helps explain why Soccer is Intaluxman's best selling cartridge.

Two teams of red and yellow players take to the Interviacion pitch to the accompaniment of the cheers and whistles of unseen supporters. A feature of the game is that only one third of the pitch can be seen at any one time and three men from each side roam around this area.

The game revolves around the two "control" men of either side in different coloured strips from

their team-mates, these are sent after the ball by the players and are usually the member of each side who last touched the ball.

The player with the ball at his feet has every chance of dribbling past the entire team and reaching the opposing penalty area but is discouraged from doing so because the defender is just fast enough to catch him. Instead upfield passes hit "blind" into unseen areas of the pitch can be the telling tactic.

The players can foul, take throw-ins, corners and dribble. With a realism which has yet to be matched by other TV games centres and if it is the best Soccer card game so far available, whether it plays the sort of game which would bring the crowds back to English soccer, is open to doubt. Still at £18.95 it is cheaper than a season ticket at the Arsenal.

JUMPING ACROBATS

The excitement of the circus comes to life in your front room with a couple of acrobats bouncing off a seesaw to burst high flying balloons.

Each balloon an acrobat hits scores him a varying number of points.

It's not as easy as it sounds. The skill of the game is in judging the positioning of the seesaw when your acrobat jumps off the platform — he jumps from either end of the screen. A miss and he crashes headfirst to the ground. When your acrobat hits the seesaw, determining the height and angle of his next jump

If you catch the plucky fellow right on the end of the sea-saw, his next leap will be prodigious and should burst plenty of balloons. Nearer the fulcrum, he will only manage a tiny jump. A high jump speeds things up and calls for really sharp reactions.

When you have gone through 10 brave acrobats the game is over. In the harder versions, a shield appears just below the rows of balloons, which makes it more difficult to pop the balloons and gives you less time to judge where the flying acrobat will land.

Just to complicate the game even further, there is an option for moving balloons instead of static ones. Altogether there are 18 different game versions contained on this Philips Videopac for the G7000 TV computer game system. It is difficult to master the tactics of this game at first but it is extremely addictive. A proven winner on other game consoles.

Jumping Acrobats sells for the usual Videopac price of £15.

BY DAVID ANNAL

WHEN you are offered a "micro-chip orchestra" or an "instant musician" for £36 it is easy to shrug off the claims as pure advertising jargon.

In the first of a series of occasional reviews on sound equipment, books and software packages, I am investigating these claims, made by the manufacturers of the VL-Tone mini-synthesiser. What do you get for your money?

I had better admit that I have spent quite some time playing with and on Casio's VL-Tone and thoroughly enjoyed every minute.

The instrument is a monophonic synthesiser, playing one note at a time but incorporating in the package a simple rhythm generator which, if required, will accompany the tune with a suitable beat generated on "bongos" and "brushes". There are 10 different rhythms available, varying from a simple march to a complicated bossanova.

The whole instrument measures 11 1/2" x 3 1/2" x 1 1/2" and includes a speaker and internal batteries. An external power pack is available for running the unit from the mains. The bat-

teries last for quite a long time, however, and an auto shut down is provided which conserves them by turning the instrument off if it is left for more than six minutes without being asked to do something.

teries last for quite a long time, however, and an auto shut down is provided which conserves them by turning the instrument off if it is left for more than six minutes without being asked to do something.

The "keys" are, in reality, small black or white buttons, as appropriate, but they operate very easily and precisely and fast trills are possible.

An experienced musician might find that they are too close

together but space is sacrificed for compactness, and compact it is!

The keyboard covers a range of more than two octaves and an octave switch is provided which lowers or raises the pitch of the keyboard by an additional octave. A "voice" switch causes the sound produced to mimic one of five in-built instrumental types. These are: piano, violin, flute, guitar and fantasy.

The actual sounds made are far from the possibilities of a full-blown synthesiser but they are sufficiently life-like to deserve their titles — just!

The fantasy sound has a pleasant "ring" to it, together with vibrato and a long decay after the key has been released. Each note on the keyboard is numbered and, when played, this note number is shown on the L.C.D. display. Controls are provided to adjust the overall volume and also the balance between the percussion effect and the chosen voice.

So it is possible to play a tune on a small keyboard instrument which sounds almost like the real thing and which can be accompanied by an appropriate percussion rhythm.

Inside the VL-Tone there is a memory which can remember up to 100 notes. If the function

switch is set to record and a tune is played, this tune will be stored in memory and can be recalled at will. The voice used, and the tempo of playback, can be varied.

Percussion can be used, if required and the notes entered need not be in "rhythm" or of the correct duration — they can be altered afterwards. This means that an inexperienced musician can enter notes in his own time as he works out what they are

from a sheet of music or copies them from one of the easy entry tunes listed in the music book which accompanies the instrument.

Having entered the complete piece, the music which has been stored is then played back using the "one-key play" facility. Each time this key is pressed, the next note of the remembered tune is produced. It can now be played to sound right by ear and it will be re-remembered in its new form! The rhythm section can be used to keep you in time but will not be remembered as well. The whole tune can now be played through by one press on the "auto play" button.

Another excellent facility is provided on the VL-Tone, the ability to set up your own individual "voice". This remarkable instrument can be programmed to remember your own unique envelope pattern.

Millions of combinations are possible! The parameters which can be controlled are: wave type, attack time, decay time, sustain level, sustain time, release time, vibrato and tremolo.

The setting combination of those you like, should be noted down before erasing them. The instrument will remember the last programmed envelope and this will be stored at power off.

Will it do anything else? Well it will tune to a concert pitch for playing with other instruments, it has an output jack which enables it to be connected to an external amplifier, such as that described last month (or an even more powerful one), it can play your programmed tune four times in a row if requested, it comes complete with a comprehensive tune book and it also contains its own in-built demonstration tune, called "German Folk Song".

Oh, and I almost forgot, you can use the VL-Tone as an eight-figure L.C.D. calculator to perform all the usual arithmetic, including square roots and percentages with the use of up to four constants and a full memory recall facility!

CAN YOU SAVE MIDDLE EARTH BY RESCUING FRODO FROM SHELOB'S LAIR...? LORD OF THE RINGS

Lord of the Rings is an entirely new type of game, combining a little of the principle of the 'Adventure' type of game, using words as spells, etc; a little of the 'Quest' principle of moving around the 'rooms'; plus actual graphics showing the various levels, walls, doors, nasties and yourself, Frodo.

The appeal of the game is that it combines skill and chance, so that though developing strategies are important, there is no guarantee that having learnt a strategy it will work twice!

The game is an adaption of Tolkien's book 'The Lord of the Rings', spell words actually being taken from the book as are the characters.

Tolkien enthusiasts will not need convincing of the necessity of saving Middle Earth by escaping from Shelob's Lair; those without this background knowledge will have to play a few games before they become addicted!

In your quest to cast the ring into the Crack of Doom to destroy its evil power you will travel a long and dangerous road. The Lair is on many levels, so you must find the stairs, and beware of the clever nasties, monsters and dwarves which can detect you from a distance and rush for your gold, which you need to bribe. There are secret tunnels, monster's tombs and the like.

During your travels you can meet Shelob herself, a Fiery Balrog, Lord of the Nazgul, a Hideous Hill-Troll Chief, a Numakil from the Far Harad, Hissing Golems, a Howling Warg, a Barrow-Wight and all those characters of spell words.

The game, though easy to actually play is complicated in itself with many and varied happenings along the way. But its advantage is that all the time you can see and manipulate yourself in eight different directions.

Peter and Margaret Hutt have developed and produced a most absorbing, and certainly addictive, game...

ZX81 1K PROGRAMS FROM VIDEO SOFTWARE LIMITED

These programs are written to the same high standards as our highly acclaimed 16K software. All the programs are entirely original. (Note the absence of Mastermind, Lunar Lander etc.) They are so good that they are worth buying even if you have the 16K RAM.

ZX81 1K PARTY TRICKS NO. 1 includes:-

- ▶ **SHOOT**: Pick your spot, take the penalty and watch the goalie attempt to save - sometimes he succeeds.
- ▶ **SKETCH**: Use cursor keys to draw large pictures - almost full screen and save them on tape.
- ▶ **NAME THE DAY**: Calculate the day of the week corresponding to any valid date in the twentieth century.
- ▶ **DIVINE THE TRAIN**: Ever wanted to drive a train? This little program will amuse the youngest members of the family.
- ▶ **CHUCKER WINGER**: Watch the computer draw its own pictures and set it up to draw yours.
- ▶ **WEATHER**: An endless variety of regional weather forecasts - all of them inaccurate, but then so are the real ones.
- ▶ **UFO**: The inevitable space game. Shoot down the dinging UFO using your photon torpedo under keyboard control.
- ▶ **WHO SHOT JIT?**: Four suspects given four places four times of day four weapons. From the clues given deduce who shot Jit!
- ▶ **FIELD GUIN**: You are the officer in charge of a field gun. Can you hit the target?
- ▶ **MYSTERY PROGRAM**: Still to be decided, but it will be as good as the others.

NOTE: These programs are NOT suitable for ZX80

Graphics

SOME inventive use of graphics should provide you with a suitably stylish missile launcher at the bottom of your space invaders' screen but now you will need something to fire at the "meanies".

A missile can be launched by pressing any key if the GET statement is used. The movement of the missile across the screen is generated by using a simple loop.

The length of the delay determines the speed at which the missile moves. A Basic program, written for the Pet, to fire a missile up the screen in the way described is:

```
10 PRINT "[CLS]"
20 POKE 33747,81: POKE 33707,93
30 Q = 33687
40 GET CS: IF CS = "" THEN 40
50 FOR I = 1 TO 23
60 POKE Q, 46
70 FOR J = 1 TO 20: NEXT J
80 POKE Q, 32
90 Q = Q - 40
100 NEXT I
110 GOTO 30
```

The way to see if the missile has hit a target is to look ahead of the missile to see if anything is in the way.

On the video screen, it is reasonable to assume that if the next missile position contains anything other than a space then the missile has hit a target and an explosion should occur! The previous loop can be modified to give this:

GO FOR YOUR MISSILE LAUNCHER

Shooting a space invader out of the sky is not the simple task it might seem.

Having shown how to draw the alien horrors and make them move,

BY GARRY MARSHALL

A program for this is:

```
10 POKE 33747, 81: POKE 33707, 93
20 Q = 33687
40 GET CS: IF CS = "" THEN 40
50 FOR I = 1 TO 23
60 POKE Q, 46
70 FOR J = 1 TO 20: NEXT J
80 POKE Q, 32
90 Q = Q - 40
100 IF PEEK(Q) < > 32 THEN 200
110 NEXT I
120 GOTO 20
200 POKE Q, 160
210 POKE Q - 40, 160: POKE Q + 1, 160
220 POKE Q + 40, 160: POKE Q - 1, 160
230 POKE Q - 40, 124: POKE Q + 1, 108
240 POKE Q + 40, 123: POKE Q - 1, 126
250 GOTO 210
```

This program gives the explosion effect generated by lines 200 to 250 if the missile hits any non-space character left on the screen when the program is run.

In my first two columns, it is now time to finish them off and so complete the fundamentals of the space invader game.

While most of the arcade space invader games contain the same 6502 microprocessor as the Pet, Apple and other microcomputers, their programs are written in machine code, rather than Basic, for reasons of speed. However, the methods contained in the programs are the same whatever language they are written in, and by presenting programs in Basic the methods can be understood relatively easily.

The program fragments presented show in turn, how to fire and display a missile, how to detect whether the missile has hit a target and how to combine these to fire at a moving target. The methods and ideas behind the programs can be modified and adapted for much more sophisticated programs.

There is plenty of scope for producing imaginative explosion effects.

A slight modification to the previous loop gives the basis of a program for shooting missiles at a moving target. The loop is:

The previous program can be modified to realise this. An instruction to clear the screen should be added to the beginning. At line 30 a call to a subroutine to plot the target should be included, and line 70 replaced by a call to a subroutine that moves the target.

BY MAURA NORRIS

THE ART OF PRINTING PATTERNS

Lost month, I left you this program:

```

10 FOR I = 1 TO 2
20 FOR J = 1 TO 4
30 PRINT "XXXX" "XXXX"
40 NEXT J
50 FOR K = 1 TO 4
60 PRINT "XXXX" "XXXX"
70 NEXT K
80 NEXT I
90 END

```

If you were able to RUN this program, you would have had the following pattern printed.

```

XXXX  XXXX
XXXX  XXXX
XXXX  XXXX
XXXX  XXXX

      XXXX  XXXX
      XXXX  XXXX
      XXXX  XXXX
      XXXX  XXXX

XXXXX  XXXX
XXXXX  XXXX
XXXXX  XXXX
XXXXX  XXXX

      XXXX  XXXX
      XXXX  XXXX
      XXXX  XXXX
      XXXX  XXXX

```

To make it easier for you to understand how the pattern is produced, I could describe the program as follows:

```
repeat 2 times
  repeat 4 times
    print first line of pattern
  end repeat
  repeat 4 times
    print second line of pattern
  end repeat
end repeat
```

You can see how all sorts of patterns could be developed by printing the appropriate strings of characters — blanks and non-blanks — within loops. By extending the above program, you could print a representation of a chessboard. With careful planning (and a good imagination), you can use this simple technique to "draw" anything from a spaceship to a personal portrait.

**REMEMBER
TO INCLUDE
COMMENTS**

There are two techniques that can be used to make programs easier to read and, therefore, easier to understand. These are: the use of comments in your programs, and indenting chosen lines of your program.

To illustrate these techniques, I will rewrite a previous program.

```

10 REM PROGRAM TO SUM 5
   PAIRS OF NUMBERS
20 REM
30   FOR I = 1 TO 5
40     REM INPUT A
       PAIR OF NUM-
       BERS
50     INPUT A,B
60     REM PRINT THE
       SUM OF THE PAIR
70     PRINT A+B

```

```
80      NEXT I
90 END
```

Comments can be inserted by the use of REM statements. "REM" indicates to the computer that the rest of the line is comment.

By including extra spaces, lines can be indented to improve the lay-out of a program. In particular, this can be used to clearly show the beginning and end of a loop.

Unfortunately, although it is good programming practice to use these techniques, they are often omitted in programs for microcomputers. The amount of space for storing programs is often very small and therefore comments are omitted to keep the size of a program to a minimum. However, unless the size of a program is critical, you should include comments as they are helpful to the programmer and others who will use the program.

THE KEY TO GOOD GRAPHICS

With an ordinary keyboard (similar to a typewriter keyboard), the quality of the pictures you can produce will be very limited. For this reason, many of the microcomputers have keyboards with special "graphic keys".

These keys produce characters such as:

The use of these special characters will allow the programmer to selectively "shade" areas of the screen. As a result, the quality and range of pictures

that can be printed will be much greater.

You now have sufficient knowledge of Basic to enable you to write programs to produce these pictures — it is simply a matter of experimenting with combinations of these graphic characters until you achieve the desired result!

Some microcomputer keyboards also have keys for the characters:

This is obviously useful for writing programs to play card games.

SOME MORE ABOUT LOOPS

I have looked at programs with loops created by a matching pair of statements of the form:

```
40 FOR I = 1 TO 5
```

80 NEXT I

The effect of this pair of statements is to cause the set of statements "bracketed" by them to be repeated five times.

The variable "I" acts as a count variable. Initially, "I" is given the value 1. Each time the instruction "NEXT I" is reached, the value of "I" is increased by 1 and the loop is repeated. This process continues until the new value of "I" would exceed the upper limit of 5. At this point, the computer stops looping and proceeds with the program.

In this way, "I" will take the values 1, 2, 3, 4, and 5, in that order, and it is therefore a count of the number of times round the loop.

My reason for explaining in detail the operation of the FOR and NEXT statements is that I now want to introduce loops of the form

```
40 For X = 2 TO 20 STEP 2
```

70 NEXT X

The format of the NEXT statement remains the same, but there are two important changes to the FOR statement.

Firstly, the initial value of the variable is a value other than 1 — in this case the initial value will be 2.

Secondly, a "step-size" of 2 has been specified. Each time the instruction "NEXT X" is reached, the value of "X" will be increased by 2. In general, if no "step-size" is specified in the FOR statement, then it is

assumed to be a step-size of 1.

In the above example, "X" will take the values 2, 4, 6, 8, ... 20 and the loop will be repeated 10 times.

It is also possible to have a negative step-size. Clearly, this means that the initial value of the variable must be greater than the final value.

```
30 FOR Y = 5 TO 1 STEP -1
```

60 NEXT Y

In this case, "Y" will take the values 5, 4, 3, 2 and 1, in that order.

These types of FOR statement are useful when you are required to repeat a calculation for a pre-determined set of values. The FOR and NEXT statements can be used in this way to actually generate the required set of values.

For example assume you want to print a table of squares of all even numbers in the range 2-20. I have already given an example of a FOR statement that will generate the required set of even numbers. The complete program would be:

```
10 REM PROGRAM TO PRINT  
TABLE OF SQUARES  
20 REM OF EVEN NUMBERS IN  
THE RANGE 2-20
```

```
30 REM  
40 FOR X = 2 TO 20 STEP 2  
50 PRINT X, X*X  
60 NEXT X  
70 END
```

NEXT ISSUE GIVE US A CHANCE

Most games involve an element of chance. In order that you may write programs to play games, you must have some way of introducing the concept of chance, or luck, in your program. Next month, I will show you how this can be done using the Basic function "RND".

I will also introduce the "IF" statement. This statement can be used to select alternative sections of your program depending upon, for example the data typed in when the program is RUN.

NEXT ISSUE

SOFTWARE SOFTWARE SOFTWARE SOFTWARE SOFTWARE REVIEWS

EAT AND BE EATEN . . .

Super Gloopers and Meteorites are the latest arcade games to come out of the Supersoft stable and excellent games they are too!

Both are written in machine code (like all Supersoft arcade games) which means of course, that they are very fast and get faster with every level you survive.

Super Gloopers was inspired by the popular Puckmen game you'd spend 20p on in the amusement arcades.

The object is to move round a maze, "glooping" all of the little dots in the maze. After a certain number of dots have been "glooped", the gloopers eaters,

which have been penned up in the centre of the maze, will come after you.

The number at the top of the maze tells you how many eaters will be released. When you clear the maze of dots, more eaters will be released to hunt you.

Once the eaters have been

released, there are two ways to escape. First you can leave the maze by one of two exits and reappear on the opposite side. Luckily, the eaters cannot follow! You can also "gloop" one of the four large dots at the corners of the maze, the eaters change colour and rush off, this is your

chance to eat them and gain extra points but you'll have to be quick because they change back and chase you again! If you "gloop" an eater it returns to the pen ready to fight again! You have three gloopers per game. This game will certainly get the old heart rate going.

The object of Meteorites is to defend your seven moon bases against a savage meteorite attack.

Your only defence is a single laser cannon, directed of course by the numeric key pad. I found it very difficult at first but it shouldn't take you long to master the technique.

The meteorites will come at you in waves of six, as the level increases, they come thicker and faster, and of course the higher the level, the higher the points gained when you hit one!

However, if you should miss one and it smashes into the surface of the planet you lose points and a base — should it hit one. There's a nice visual effect in this game, when a meteorite does hit the surface the mountain range on the screen shakes.

After you've destroyed the first wave you will be awarded an extra base and the level of play goes up! Apparently something happens after the fifth level, but as I've never managed to reach the fourth level I can't tell you what it is, at the moment anyway!

Both Super Gloopers and Meteorites have good sound effects. Two excellent games with excellent graphics to keep the whole family amused for hours (if your fingers can keep up the pace).

Both run on an 8K Pet and cost £5 plus V.A.T. each.

NO HIDING PLACE IN THIS INVASION

Super Invasion & Double Breakout

American professionalism has brought home the shortcoming of many of our own software houses by producing two of the best Sinclair games cassettes around.

U.S. firm, Beam Software, offers Double Breakout and Super Invasion at £5 each — distributed over here by Essential Software.

Super Invasion is available in two forms — one for the original ZX80 and the other for the ZX81/ZX80 with 8K ROM. The documentation on all the Beam Software programs is very good, with the rest of the instruction sheet having a comprehensive description for fool-proof loading of the cassettes.

Super Invasion is a very basic form of space invaders without the usual "barriers" that give protection from the invader's bombs. This makes it rather difficult to win, especially as you only have five lasers to fire, and you lose one each time you are hit. Once all the lasers have been destroyed, the game stops for a few seconds and then starts again.

There are three levels of skill, and even the lowest is relatively difficult! The graphics are

very good, with no screen flicker (even on the old ZX80) and smooth control of the laser platform. A slightly more sophisticated version is available for 2K ZX80 old ROM on the reverse of the ZX80 version.

ZX80 Double Breakout is another machine code program which also has some very smooth graphics. There are seven levels of skill, with four being for the average player. You are given nine tries to

break through two "walls". A bat is manoeuvrable in the vertical direction and the object of the game is to keep hitting the ball back at the wall so that bricks are dislodged progressively. Unfortunately, the ball bounces back at different angles. Sometimes you need to hit the ball with a moving bat to get the required spin.

All three games represent good value for money, and are highly recommended.

An education in computers starts with you!

There is another side to microcomputing, just as interesting as games, especially if you are a responsible parent or a teacher with responsibility for teaching computing or using computers as teaching aids. Computers in Education is an important and expanding field the implications and potential is only just beginning to be realised. If you have children, or are a teacher you have a responsibility to keep yourself informed of developments in this area. Educational Computing is written for you.

Every issue is packed with useful and up to date information covering product news, conference news, opinions, advice, application stories, case studies and a forum for you to discuss your concerns and interests.

Each month we select a specific applications area. In the past we have looked at such subjects as Mathematics, Home Economics, Business Studies and Engineering. In the coming months we will be looking at Social Sciences, English, Computer Science and History.

We show the many interesting ways people are using computers as teaching aids. And give practical advice and guidance.

Educational Computing also publishes comprehensive surveys that are packed with the kind of information you need to know. In the past we have looked at systems costing less than £600, Educational software, courses and training.

If you are a teacher, the nature of your job and the responsibilities that go with it demand that you keep yourself informed of current affairs — and little is going to affect you, your colleagues and your students in this respect as much as computers.

If you are a responsible parent you will want to know what your children are being taught in schools about the new technology. Many parents are diligent members of their local PTA. From January we shall carry a regular feature looking at the many ways PTAs have helped schools raise money for computers, peripherals and software.

The best way of keeping yourself directly informed is to subscribe to Educational Computing.

Stop Press

Special notice Special notice Special notice
From the January issue onwards Educational Computing will publish the official newsletter of MLP (Micro electronics in Education Project) all the latest details of their activities will be available. So make sure you take out your subscription now.

SOFTWARE GLOSSARY

A beginner's guide to plain jargon

ARGUMENT The known reference factor necessary to find the desired item in a table.

ARRAY A series of items (data or information) arranged to form a meaningful pattern.

ARRAY INDICES Symbols or numbers used to identify a particular quantity in an array.

BITS Binary digits. The 0s and 1s that make up the binary code computers understand.

BUG A slang term given to a mistake in a computer program which prevents it working. It can refer to a mechanical, electrical or electronic defect in a computer.

BYTE A term to measure a number of bits (binary digits), usually eight bits to a byte.

CHIP A tiny piece of silicon which holds all the components that make up a microprocessor.

CHARACTER STRING A sequence of characters in a row.

FOR... NEXT A Basic statement which is an instruction used for repetition of a sequence of program statements (see loop).

FUNCTION A special purpose or characteristic action of a program.

GOSUB A Basic command instructing the computer to go to a subroutine in a computer program.

GOTO A Basic command which tells the computer to jump to another line in a computer program.

GRAPHICS CHARACTERS The name given to pictorial representation of data such as plotted graphs, engineering drawings and computer games.

HARDCOPY A printed copy of machine output in a visually readable form.

HARDWARE A general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

INPUT Information which is fed into the computer.

INTEGER A number which does not contain a decimal point, i.e. a whole number.

K Abbreviation for Kilobyte.

KILOBYTE A measurement of memory capacity, 1024 bytes of memory. So 8K is equivalent to 8192 bytes.

L.E.D. (Light Emitting Diode) Provides a simple display and consists of an electron tube which lights up when electricity is passed through it. Used as an alternative to liquid crystal displays in calculators and watches.

LET A Basic statement which defines a variable. E.g. LET A=0.

LOOP A Basic function referring to the repeated execution of a series of instructions for a fixed number of times.

MACHINE CODE The term used to refer to symbols or numbers assigned to parts of a machine. It is the same as operation code which is the symbol telling the computer what operation to perform. When a game is written in machine code it makes everything happen more swiftly.

MEMORY A measurement of how much information a computer can cope with.

MICROPROCESSOR another name for a chip.

SOFTWARE GLOSSARY

A beginner's guide to plain jargon

NEXT (See FOR...NEXT).

PEEK A statement used in Basic which allows you to read the contents of a specified memory address.

POKE An instruction used in most versions of Basic allowing you to store integers in a specific place in memory.

PRINT A Basic command which tells the computer to perform a calculation in a program.

PRINTOUT The data output from the computer which appears in printed form.

PROCESSING Handling and manipulating computer data.

PROGRAM (Computer) A series of instructions fed into a computer which will solve a problem or accomplish an objective.

REM A basic statement which provides an explanation of key sections in a program.

ROM (Read Only Memory) A memory chip which can only be read from and not written into.

ROUTINE A set of coded computer instructions used for a particular function in a program.

SOFTWARE The programs fed into a computer, which make them perform what we want them to do.

STRING A connected sequence of characters, words or other elements usually symbolised with the \$ (dollar) sign.

SUBROUTINE A computer program routine that is translated separately, generally used in several computer programs or several times in one program.

PROGRAM LOGIC Making sure a program is designed and input in the correct sequence.

RAM (Random Access Memory) This is a memory chip which you can load programs and data to and from. There are different sized RAMs capable of storing various amounts of information.

TABLE A collection of information suitably written for easy reference.

VALUE The numerical quantity of a data element, and is the number assigned to a variable.

VARIABLE A symbol whose numeric value can be changed at all times. It is used when writing programs.

PANASONIC KX-T1520 AUTOMATIC TELEPHONE ANSWERING SYSTEM

NOW AVAILABLE
£190 + VAT

One of the most technically advanced telephone answering units available, the KX-T1520 features a double cassette system - a CRO cassette for incoming calls which can be written to 30 secs. or 60 secs. or recorded in three entries and a 20 sec. continuous loop cassette for your outgoing messages which are recorded through the built in microphone. Your telephone conversations can also be recorded after a beep tone has notified you either they are being used. Incoming calls can be monitored and the ring control is adjustable.

The system can be set up with Playback Repeat Repeat and Stop and Start facilities. It is also possible to dial back and messages to any line the phone answers you live in the world.

WE HAVE ONE OF THE LARGEST COLLECTIONS OF COMPUTER BOOKS UNDER ONE ROOF, ALONG WITH RACKS OF SOFTWARE FOR THE GENIE AND TRS80.
